

20/05/2026

1. Dashboard

Layout customization

- Open Dashboard, walk through KPI cards + chart widgets pre-loaded for the Owner role
- Click "Add widget" → side panel with searchable widget catalog
- Search a widget by name → add it → widget lands in the grid
- Click the ⋮ on any widget → "Remove widget" → confirmation modal → toast

Recent activity feed

- Scroll to the activity feed → recent bookings & mock activity
-

2. Class template

Browse + filter

- Open class templates → grid of template cards
- Search by template name → results filter live
- Open the side filter → filtering → Apply / Clear

Create

- Click "Add template" → 2-step creation
 - Step 1: Basic info (name, description, banner image upload, category, class type, duration, capacity) + live preview card on the right
 - Step 2: Applicable memberships & packages — multi-select expandable card
- Click "Create template" → toast notifications → returns to the list with new card

Detail page

- Click any template → detail page opens with:
 - Banner + status badge + sidebar action menu
 - Tabs: Classes · Applicable Memberships · Applicable Packages
- Show the Classes tab — sortable columns, search, and filter
- Row ⋮ on a session → View details / Edit class / Cancel class

Edit + state changes (all via sidebar action menu in class template details)

- Edit → opens the same 2-step form prefilled → save changes → toast
 - Archive → confirmation modal → status flips to Archived → toast
 - Recover an archived template → back to Active
 - On an Active template with sessions: Deactivate → can't delete because sessions exist → status flips to Inactive
 - Reactivate an inactive template → back to Active
 - On a never-used template: Delete option replaces Deactivate → permanent removal
-

3. Class schedule

Browse — 4 views

- Switch between List, Day, Week, Month tabs

- Day/Week/Month grids show color-coded class blocks by category

Class schedule state

- Completed class: We can see all customer mark status & reviews, and can also delete the reviews.
- Ongoing class: We can mark the customer as “present.”
- Upcoming class over 24hrs: We can see the customers' list and still edit the class
- Upcoming class under 24hrs: We can see the customers' list
- Cancelled class: We can see the customer list in cancelled status, and we can't do actions in this class.

Floating popup

- Click any class in Day/Week/Month → floating popup with class info + status badge (Upcoming, Ongoing, Completed, Cancelled) + action icons (Add customer, Edit, Duplicate, Cancel) + "See details."

Search + filter (List view)

- Search class schedule
- Filter side panel

Add a class — 3-step flow

- Click "Add Class"
 - Step 1: Class details (class template, gender, equipment, cover, capacity, duration) + live preview card
 - Step 2: Location & instructor — room picker shows room capacity
 - Spot selection toggle → opens overlay to customize spots (rows/columns + block individual spots).
 - Step 3: Date & time — Repeat (Does not repeat / Repeat weekly), Date picker, Start time. Recurring weekly with end condition & per-day time slots.

Duplicate a class

- From popup → Duplicate → opens Add Class form pre-filled

Edit a class

- From row : or popup → Edit class
- Save → toast "Class updated"
- Right preview panel reflects the actual class info

Add customer

- From popup or class schedule details → Add customer → opens detail page with Add Customer drawer auto-expanded → search/select customer → assign credit from their active plan → confirm → customer lands in booked or waitlist tab
- Buy a plan membership/credit package in POS for a customer that doesn't have any plan
 - Confirm payment when buying the plan for the customer

Cancel a class

- Cancel class → destructive modal showing booked customer count → confirm → status flips to Cancelled, credits refunded → toast

Class detail page

- Tabs: Booked · Waitlist · Cancelled · Reviews & Rating
- Booked tab — roster with avatar, plan badge, spot, attendance status. Bulk select → "Mark present" or "Remove"

- Mark a customer present → toast → attendance bar on the class template detail updates
- Reviews tab — star ratings with comments, delete review action

22/05/2026

ONRA STUDIO: PROTOTYPE UPDATE AND WALKTHROUGH

Overall modules done 4/25

This update covers:

1. Dashboard
2. Class Templates
3. Class Schedule
4. Memberships and Packages

Each section below explains the purpose of the module, available actions, and recent improvements.

1. Dashboard

The home screen provides a single, at-a-glance view of daily studio performance.

Available Actions:

- View key performance metrics at the top of the screen.
- Customize the layout using controllable widgets.
- Add a widget: Open the widget picker to select desired screen elements.
- Remove a widget: Use the menu on any widget and select Remove widget to clear it from the view.
- Review daily activity to monitor current operations.

Recent Improvements:

- The widget remove and add action is have a notification feedback.
- Cleaner layout and consistent styling across every card.

Note: Since the dashboard is using data, for now all the data in dashboard is mock data not real based on branch and all module.

2. CLASS TEMPLATES

The library of reusable class types acts as the master definition for offered classes (e.g., Reformer Pilates, Barre, Hot Yoga). Templates are built once and scheduled as needed.

Available Actions:

- Browse all class templates as a card grid, each showing its image, category, duration and capacity.
- Search for a template by name.
- Filter the list by status and by category.
- Create a new class template on a dedicated, full-page form: set the name, description, category, class type, duration, capacity, and a cover image.

- Open a template to see its full detail page.
- Edit an existing template's details at any time.
- Manage a template's lifecycle:
 - Deactivate: pause a class type without losing data.
 - Archive: retire a discontinued class type.
 - Delete: permanently remove an unused template.
- Every change displays a confirmation and a success message.

Recent Improvements:

- Full creation and editing flow on dedicated full-page screens, replacing constrained pop-ups.
 - A complete detail page for each template.
 - Mapping all the data in the class template to class schedule, so class template and class schedule is connected in terms of data.
-

3. CLASS SCHEDULE

The calendar of scheduled classes displays the actual sessions available for booking, built from class templates.

Available Actions:

- View the schedule in Day, Week, Month, or List formats.
- Classes are color-coded by category so the calendar is easy to scan.
- Add a class to the schedule: pick a template, then configure the date, time, room, instructor, and capacity.
- Set up recurring classes so a weekly slot is created in one step.
- Filter the schedule by category, instructor, status, or branch.
- Open a class to see its full detail page, including:
 - The roster: every member booked into the class.
 - The class status (Upcoming, Active, Completed, or Cancelled) with an adaptive screen interface.
 - Attendance: mark member presence.
- Cancel a class when needed.
- Assign a substitute instructor to a class.
- Every action updates the schedule and related screens instantly.

Recent Improvements:

- Full multi-view calendar (Day, Week, Month, List).
- Dedicated creation and editing screens for scheduling a class.
- A complete class detail page with roster and attendance.
- The schedule stays in sync with class templates and instructors automatically.
- Add the logic for bookable time slot and date.
- Add badge in the floating bar to show class status.
- Add message and conditional logic for only show the class is not past the live time "A time slot you set has already passed today's time, so that class will be scheduled from its next date instead."

- Conflicting class based on instructor, time, date, room.
-

4. MEMBERSHIPS AND PACKAGES

Products include the memberships and class packages available for purchase.

Available Actions:

- See all memberships and packages in one organized list with tabs, search, and filters.
- Create a membership or package using a step-by-step full-page form to configure the name, description, price, included credits, duration, applicable branches, and purchase rules.
- Open a product to see its detail page, including the customers who currently hold it.
- Edit a product's details at any time.
- Manage each product's lifecycle:
 - Deactivate: suspend sales while maintaining access for existing holders.
 - Archive: fully retire a product.
 - Delete: remove an unpurchased product.
- Pricing is shown in AED throughout.
- Every action is confirmed with a notification/toast message.

Recent Improvements:

- Step-by-step creation and editing flow for both memberships and packages.
 - A full product detail page showing live data, including active customers.
 - Consistent status management with the correct options per product.
 - Centralized, connected sample data so products, classes and customers all reference each other correctly.
-

A FEW THINGS TO KNOW

- This interactive prototype allows clicking, creating, editing, and deleting.
- Changes are not permanent, and the prototype will reset to its sample data upon reloading.

29/05/2026

ONRA STUDIO: PROTOTYPE UPDATE AND WALKTHROUGH

Overall modules done **7/25**

This update covers:

1. Dashboard
2. Class Templates
3. Class Schedule
4. Point of Sale (POS)
5. Memberships & Packages
6. Gift Cards
7. Promos

Below, you will find a breakdown of what each module is for, its key capabilities, and the improvements made in this specific build.

1. DASHBOARD

Your home screen, providing a single, at-a-glance view of how the studio is performing today.

Key Capabilities

- **Monitor key metrics:** View the headline numbers for the day directly at the top of the screen.
- **Customise your view:** Build and organise your dashboard using widgets you control.
- **Add widgets:** Open the widget picker and select the specific metrics you want to track.
- **Remove widgets:** Click the "... " menu on any widget and select *Remove widget* to clear it from your screen.
- **Review today's activity:** Track what is happening across the studio in real-time.
- **Adjust time periods:** Shift the date range to view the numbers you care about most.

Recent Improvements:

- The widget remove and add action is have a notification feedback.
- Cleaner layout and consistent styling across every card.

Note: Since the dashboard is using data, for now all the data in dashboard is mock data not real based on branch and all module.

2. CLASS TEMPLATES

Your library of reusable class types. This acts as the master definition for each class you offer, allowing you to build a template once and schedule it as often as you like.

Key Capabilities

- **Browse all templates:** View a visual card grid displaying the cover image, category, duration, and capacity for each class.
- **Search and filter:** Quickly find templates by name, or filter your view by status and category.
- **Create new templates:** Use a dedicated, full-page form to establish the name, description, category, class type, duration, capacity, and cover image.
- **Manage details:** Open any template to view its comprehensive detail page or edit its settings at any time.
- **Control the lifecycle:** Choose to **deactivate** (pause a class), **archive** (retire a class), or **delete** (permanently remove an unused template).
- **Receive feedback:** Every action triggers a confirmation and success message so you always know your changes were saved.

Recent Improvements:

- Full creation and editing flow on dedicated full-page screens, replacing constrained pop-ups.
 - A complete detail page for each template.
 - Mapping all the data in the class template to class schedule, so class template and class schedule is connected in terms of data.
-

3. CLASS SCHEDULE

Your calendar of scheduled classes. This is the live roster of actual sessions that members can book, built directly from your class templates.

Key Capabilities

- **Flexible viewing:** Switch freely between Day, Week, Month, or List calendar views.
- **Quick scanning:** All classes are colour-coded by category to make the calendar easy to read at a glance.
- **Schedule new classes:** Select a template, then assign the specific date, time, room, instructor, and capacity.
- **Set recurring slots:** Create a weekly scheduled class in a single, streamlined step.
- **Filter the schedule:** Narrow down your calendar by category, instructor, status, or branch.
- **Manage class operations:** Open a class to view the full roster, track the status (Upcoming, Active, Completed, or Cancelled), and mark member attendance.
- **Handle adjustments:** Cancel classes with a recorded reason or easily assign a substitute instructor.

Recent Improvements:

- Full multi-view calendar (Day, Week, Month, List).
- Dedicated creation and editing screens for scheduling a class.
- A complete class detail page with roster and attendance.
- The schedule stays in sync with class templates and instructors automatically.
- Add the logic for bookable time slot and date.

- Add badge in the floating bar to show class status.
 - Add message and conditional logic for only show the class is not past the live time “A time slot you set has already passed today's time, so that class will be scheduled from its next date instead.”
 - Conflicting class based on instructor, time, date, room.
-

4. POINT OF SALE (POS)

Your central checkout terminal. Sell memberships, packages, and gift cards to existing members or walk-in customers in a single, fast flow.

Key Capabilities

- **Two-panel layout:** Browse the product catalogue on the left while managing the live cart on the right.
- **Catalogue navigation:** Browse via tabs (All, Memberships, Packages, Gift cards) and utilise search and side-panel filters for credit and price ranges.
- **Manage customers:** Search for existing profiles by name or email, process a walk-in, or create a brand new customer inline without leaving the till.
- **Manage the cart:** Add items by clicking product cards, adjust quantities with +/- buttons, or remove lines entirely.
- **Apply discounts:** Input promo codes to instantly calculate discounts, or switch to a custom percentage discount (capped by admin role limits).
- **Personalise gift cards:** When selling a gift card, a modal opens to capture the recipient's name, email, custom amount, and a personal message.
- **Review real-time totals:** Track the Subtotal, Promo discount, Custom discount, Tax, and Final Total before initiating the charge.

What's New in this Build

- **Integrated terminal:** A complete two-panel POS terminal is now built directly into the admin dashboard.
 - **Live discounting:** Working promo code and custom discount flows update your totals in real-time.
 - **Gift card capture:** A dedicated recipient capture flow ensures cards sold at the till are always properly personalised.
 - **Inline customer creation:** Register walk-in customers seamlessly without abandoning the checkout process.
-

5. MEMBERSHIPS & PACKAGES

Your product catalogue. This module houses the memberships and class packages that customers purchase to attend your sessions.

Key Capabilities

- **Organised overview:** View all memberships and packages in one unified list equipped with tabs, search, and filtering.
- **Step-by-step creation:** Build products on a clear, full-page form by configuring the name, description, price, included credits, duration, applicable branches, and purchase rules.
- **Track active users:** Open a product to view its detail page, which includes a list of all customers who currently hold it.
- **Manage the lifecycle:** Edit details, **deactivate** (stop selling while keeping existing access), **archive** (fully retire), or **delete** (remove unpurchased products).
- **Standardised currency:** All pricing is clearly displayed in AED throughout the module.

Recent Improvements:

- Step-by-step creation and editing flow for both memberships and packages.
- A full product detail page showing live data, including active customers.
- Consistent status management with the correct options per product.
- Centralised, connected sample data so products, classes and customers all reference each other correctly.

6. GIFT CARDS

Your gift card templates. Each gift card dictates the price (or price range) and the validity period for cards that customers can purchase and gift.

Key Capabilities

- **Comprehensive list view:** Manage your gift cards with search functionality, status filters (Active, Inactive, Archive), sortable columns, and bulk actions.
- **Track active inventory:** Each row displays the card name, price, number of active customers holding the card, valid-until date, and current status.
- **Create new:** Use a step-by-step form to set the name, description, and price.
- **Flexible pricing & validity:** Choose between a fixed amount or a custom amount range, and decide if the card has no expiry or explicit issue/expiry dates.
- **View active holders:** Open a design to review its settings and view the "Active customers" tab, which lists every issued card alongside the holder's name, balance, and expiry.
- **Manage the lifecycle:** Edit, deactivate, archive, or delete gift cards as necessary.
- **Execute bulk actions:** Select multiple gift cards to Archive, Reactivate, Recover, or Delete them simultaneously.

What's New in this Build

- **Dynamic creation flow:** Step-by-step creation now supports both fixed-amount and custom-amount configurations.
- **Holder tracking:** A complete detail page that displays every customer currently holding a specific gift card.
- **Enhanced list management:** Fully functional search, sort, filter, bulk actions, and export capabilities on the main list.

7. PROMOS

Your discount management centre. Create and control promo codes with strict rules regarding who can use them, what they apply to, and how long they remain valid.

Key Capabilities

- **Browse and filter:** View all promo codes in a card grid detailing the name, action type, offer, code, branches, and validity. Filter by status or date range.
- **Define promo details (Step 1):** Upload a banner, set the name/description, pick an action (Book a class or Buy a package), set the duration, choose the offer type (Free class, % off, Fixed AED), and define usage limits.
- **Define visibility (Step 2):** Specify exactly which branches, products, packages, and customer segments the promotion applies to.
- **Review and edit:** Open a promo to view a clean, scannable layout of all your configured settings, and edit them at any time.
- **Manage the lifecycle:** Deactivate (pause), archive (retire), or delete (remove) promo codes as needed.
- **Seamless integration:** Promo codes created in this module flow directly into your POS for instant application at checkout.

What's New in this Build

- **Advanced targeting:** A new step-by-step flow gives you full control over promotional targeting and validity periods.
- **Scannable details:** A complete, easy-to-read detail page for every promotional code.
- **Lifecycle options:** Working status management tailored to promotional campaigns.

IMPORTANT NOTES REGARDING THE PROTOTYPE

- **Interactive experience:** This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
- **Live updates:** The prototype uses realistic sample data. Any changes you make will apply live as you navigate between different screens.
- **Safe testing environment:** Nothing you do here is permanent. The prototype will automatically reset to its default sample data whenever the page is reloaded.

05/06/2026

ONRA STUDIO: PROTOTYPE UPDATE AND WALKTHROUGH

Overall modules done 11/25

This update covers:

1. Marketing
2. Customer management
3. Insights
4. Pay rate

Below, you will find a breakdown of what each module is for, its key capabilities, and the improvements made in this specific build.

1. Customer Management

Your complete customer directory, consolidating plans, payments, agreements, and history for every member and walk-in.

Capabilities

- **Comprehensive Directory:** View all customers in a centralized table displaying avatars, names, contact info, current plans, statuses, and last visits. Access quick actions directly from the row menu.
- **Search & Filter:** Search by name, email, or phone, and use filter for user.
- **Data Management:** Sort columns, adjust rows per page, and utilize bulk actions (Archive, Reactivate, Recover, Deactivate, Delete) with a floating live selection counter.
- **Add customer, Import & Export:** Add new customers manually via a dedicated form, import them in bulk, or export the current view to a CSV file.
- **Detailed Profiles:** Open any customer record to access:
 - **Overview Sidebar:** Avatar, status, contact, join date, plan summary, and credit balance.
 - **Plan Tab:** Complete history of memberships and packages. Actions include Freeze, Unfreeze, Cancel, and Remove free credit.
 - **Bookings tab:** See the upcoming and history
 - **Payments Tab:** Financial overviews (total spent, net spend), gift card balances, saved methods, and full transaction history. Process refunds with required reasoning.
 - **Details tab:** See the detail of customer
 - **Agreements Tab:** Track issued, signed, and pending agreements across all branches.
 - **Referrals:** See the success referred people
- **Complimentary Credits:** A dedicated workflow to grant free credits with predefined reasons (loyalty, new member) and notes.
- **Lifecycle Control:** Manage customer states directly (Deactivate, Archive, Reactivate, Recover, Delete), ensuring historical data is preserved appropriately.

What's New

- Enhanced list views featuring advanced multi-filtering, sorting, bulk actions, and CSV exports.
 - Synchronized live data across the Plan, Payments, and Agreements tabs.
 - New dedicated screen for complimentary credits.
 - Fully functional workflows for plan modifications (freeze/unfreeze/cancel) and reasoned refunds.
 - Context-aware lifecycle management that only shows the correct options for each customer's specific situation.
-

2. Marketing

Your control center for marketing campaigns, manage banners, announcements, and events with precise targeting capabilities.

Capabilities

- **Campaign Dashboard:** Browse campaigns in a card grid displaying the banner, type, status, title, action type, branches served, and expiry date.
- **Search & Filter:** Find campaigns by name or description, and filter by branch, status (Active/Inactive/Archived), and expiry date range.
- **Campaign Creation:** Launch new campaigns using a guided, two-step configuration flow:
 - **Step 1 (Configuration):** Upload banners, set titles/descriptions, and define the action (Book an event, Buy a ticket, External link). Set specific start and end times, or mark as ongoing.
 - **Step 2 (Visibility):** Target specific branches, packages, classes, and customer segments (e.g., Everyone vs. New users only).
- **Campaign Details:** Open any campaign to view a clean, scannable summary of its targeting choices, view counts, and active dates.
- **Lifecycle Control:** Edit active campaigns at any time, or manage their status (Deactivate, Archive, Reactivate, Recover, Delete).

What's New

- A newly designed card-grid layout with active search and filtering.
 - Intelligent, type-aware action fields in the campaign creation flow.
 - Visibility settings directly connected to your studio's live branches, packages, and classes.
 - Safety constraints that only allow campaign deletion if it has never been viewed by a customer.
-

3. Insights

Your studio-wide analytics dashboard, providing financial, membership, and class data through adaptable KPI cards and charts.

Capabilities

- **Unified Dashboards:** Switch seamlessly between **Finance**, **Memberships**, and **Classes** analytics.
- **Dynamic Time Periods:** Adjust the data range with a single click (Day, Week, Month, Year, Custom). All charts, KPI values, and comparison badges automatically recalculate.
- **Contextual KPIs:** Every metric displays its current value, a color-coded percentage change badge, and the specific comparison period.
- **Finance Data:** Track net revenue, subscription/package sales, payment dues, and gift-card revenue. Includes charts for payment statuses, sources, and sales by product.
- **Membership Data:** Monitor active plans, intro offers, cancellations, and billing issues. Includes charts for unit sales and top-performing membership plans.
- **Class Data:** Analyze scheduling, check-ins, occupancy rates, and revenue per visit. Includes charts for bookings by source, attendance overviews, and class popularity.

What's New

- Three fully structured dashboards sharing a centralized time-period and search control bar.
 - Responsive chart scales and X-axes that adapt perfectly to your chosen date ranges.
 - A standardized, highly readable KPI card design deployed across all tabs.
-

4. Pay Rate

Your library for instructor compensation. Define payment rules once and assign them effortlessly to your staff.

Capabilities

- **Rate Directory:** View all pay rates in a unified table showing the rate name, type, formatted rate description, assigned branches, and status.
- **Search & Filter:** Search by name or description, and filter by branch or active/archived status.
- **Rate Creation:** Build new compensation models using a two-step configuration flow:
 - **Step 1 (Details):** Select from five structured rate types: **Flat** (fixed per class), **Tiered** (attendance-based brackets), **% of Revenue**, **Hybrid** (base rate + bonus), or **Monthly Salary** (fixed monthly + optional commission/bonus caps). You can also toggle conditions for checked-in or late-cancelled customers.
 - **Step 2 (Assignment):** Assign the finalized rate to specific branches.
- **Pay Rate Details:** Open a pay rate to view and manage staff currently assigned to it.
- **Lifecycle Control:** Archive obsolete rates, recover them later, or bulk-delete unused rates.

What's New

- A comprehensive list view with sortable columns, pagination, and bulk actions.
 - Support for five distinct rate types with tailored configuration options and a real-time natural language preview.
 - A dedicated detail page that cleanly separates assigned instructors from the rate's underlying logic.
-

Important Notes on the Prototype

- **Interactive experience:** This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
- **Live updates:** The prototype uses realistic sample data. Any changes you make will apply live as you navigate between different screens.
- **Safe testing environment:** Nothing you do here is permanent. The prototype will automatically reset to its default sample data whenever the page is reloaded.

12/06/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done **18/25**

This update covers

- Payroll
- Staff & Permissions
- Tax
- Agreements
- Payments
- Integrations
- Referral

Below, you will find a breakdown of what each module is for, its key capabilities, and the improvements made in this specific build.

1. Payroll

Your dedicated workspace for processing instructor compensation, tracking earnings, and running payroll cycles.

Capabilities

- Compensation Directory — View all instructors in a centralized table displaying avatar, name, assigned pay rate, branch, classes taught in the period, computed earnings, and last payroll status.
- Search & Filter
- Instructor Earnings Detail — Open any instructor to inspect the per-class breakdown: class name, date, attendees, pay rate applied, and computed earnings for the period.
- Run Payroll — Guided multi-step flow for processing a pay cycle:
 1. Select Period — Choose the pay period.
 2. Review Earnings
 3. Adjustments
 4. Confirm — Lock the run with attribution and timestamp.
- Payroll History
- Export — One-click CSV export of any compensation view.

What's New

- A comprehensive list view with sortable columns, period KPI cards, and CSV export.
- A guided Run Payroll wizard with live earnings preview and per-instructor adjustment support.
- Instructor earnings detail page with full per-class transparency and pay rate snapshot.

- Centralized earnings math
-

2. Staff & Permissions

Your team management hub, covering staff records, role definitions, and granular permission control.

Capabilities

- Staff Tab — Browse all team members with avatar, role, branch assignment, contact info, pay rate, and status.
- Search & Filter
- Add Staff — Onboard new team members via a dedicated form covering personal info, role assignment, branch scope, contact details, and starting pay rate.
- Staff Profile — Open any staff member to access personal info, role + branch assignment, pay rate history, and lifecycle controls (Deactivate, Archive, Reactivate, Recover).
- Roles Tab — Browse all defined roles with their member count, status, and quick actions. The Owner role is locked and cannot be edited or deactivated.
- Role Detail
- Edit Permissions — Inline editor to toggle granular permissions per module. Live preview of the affected member count.
- Bulk Actions — Multi-select staff or roles for bulk Archive, Reactivate, Recover, Deactivate, Delete with a floating action bar.

What's New

- A comprehensive list view for both Roles and Staff with sortable columns and bulk actions.
 - Dedicated permission matrix editor with per-module scoping and live member-count preview.
 - Add / Edit staff form with role + branch + pay rate assignment in one flow.
 - Lifecycle controls that preserve historical data appropriately (archived staff stay queryable for payroll history).
-

3. Tax

Your tax configuration library, defining rates once and applying them across product categories.

Capabilities

- Tax Rates Tab — Browse all configured tax rates with name, percentage, inclusive / exclusive treatment, status, and usage count.

- Add / Edit Tax Rate — Configure a rate with name, percentage, and inclusive vs. exclusive treatment.
- Apply Tax Rates Tab — Map each product category (Membership, Credit package, Gift card, Pay rate) to one of your defined rates. One-click switch a category's rate without revisiting its individual products.
- Studio-Wide Toggle — Flip the global "Prices include tax" setting that drives display behavior across the storefront and POS.
- Lifecycle Control — Archive obsolete rates, recover them later, or bulk-delete unused ones.

What's New

- A two-tab structure that cleanly separates rate definition from rate application.
 - Real-time usage tracking — see exactly which categories each rate is bound to.
 - Bulk actions with delete-only-when-unused safety constraints; tax rules referencing a deleted rate are gracefully cleared.
-

4. Agreements

Your library of waivers, terms, and policy documents version-controlled and assignable across the customer base.

Capabilities

- Agreements Directory — Browse all documents with title, current version number, status (Active / Archived), last updated date, and signed / issued counts.
- Agreement Detail — Open any agreement to view its full content, version history, and signature stats.
- Create New Agreement — Author a new document with title, full body text, and effective date.
- New Version — Publish a new revision of an existing agreement. Old versions are preserved for full audit trail.
- Edit Mode — Inline edit the latest version's title or body before publishing.
- Lifecycle Control — Archive old agreements when retired. The customer profile's Agreements tab respects status when surfacing what each member has signed.

What's New

- Full version history with per-version stats (issued / signed counts).
 - Rich body editor for clean formatting.
 - Signature stats that pull from the customer agreements table in real time so the directory always reflects live data.
-

5. Payments

Your payment provider configuration center, managing Stripe, Apple Pay, Google Pay, and other gateway connections.

Capabilities

- Provider Card Grid — Browse all available payment providers in a card layout showing the provider logo, connection status (Connected / Disconnected), and last sync timestamp.
- Connection Flow — Connect a new provider via its standard OAuth or API key flow with a guided modal.
- Disconnect — Sever a provider connection with confirmation.
- Status at a Glance — Each card surfaces its real-time health (connection valid, last successful transaction, error state if any).
- POS Sync — Connected providers propagate to the POS checkout payment-method picker automatically — no extra step.

What's New

- Card-grid layout with connection status badges.
 - One-click connect / disconnect flows with toast confirmation.
 - Real-time provider state propagation to every dependent surface (POS, refund flows, payment history).
-

6. Integrations

Your third-party app marketplace, surfacing every integration your studio can wire up.

Capabilities

- Integration Card Grid — Browse all available integrations with logo, short description, category, and current connection status.
- Connection Flow — Connect each integration through its provider-specific authentication (OAuth, API key, webhook URL).
- Disconnect — Sever an integration with confirmation. Per-integration configuration is preserved for next time.
- Per-Integration Configuration — Some integrations expose additional settings (default calendar, channel selection, sync frequency, etc.) reachable from the card.

What's New

- Newly designed card grid with category grouping and connection status badges.
- Standardized connect / disconnect flow across all integrations.

- Per-integration detail page that hosts provider-specific settings without leaving the studio admin.
-

7. Referral

Your customer referral program control center, setting rewards for both referrers and referred members.

Capabilities

- Program Master Switch — Enable or disable the entire referral program with one toggle. The customer-facing referral CTA respects this flag.
- Edit Referral Settings — Two-step wizard for benefit configuration:
 1. New Customer Benefit — Define what a NEW (referred) customer receives: credit count and welcome message copy.
 2. Existing Customer Benefit — Define what an EXISTING (referring) customer earns: trigger condition, minimum referred count, credit reward, and acknowledgement message.
- Customize Referral Information — Edit the customer-facing description copy shown in the referral share UI.
- Live Data Sync — Configured benefits propagate to the customer profile's Referrals tab the moment they're saved.

What's New

- Two-step wizard for benefit configuration with field validation per step.
 - Customize referral information form to edit the customer-facing copy without code changes.
 - Master switch that respects every dependent surface (program off → customer-facing CTA hides studio-wide).
-

Important Notes on the Prototype

- Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
- Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
- Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
- Resetting to sample data — To return to the default seeded data:
 - Browser settings → Privacy → Clear browsing data for this site, OR
 - DevTools → Application → Local Storage → delete the onra-demo-state key.

Onra Studio Prototype Update and Walkthrough

Overall modules done 25/25

This update covers new moduls:

- Reports
- Notifications
- Customer notification settings
- Booking rules
- Business & Locations
- Account settings
- Branding

Below, you will find a breakdown of what each module is for, its key capabilities, and the improvements made in this specific build.

1. Reports

Your reporting workspace, organised into five categories that cover every angle of studio performance — financial, membership, activity, customer, and frozen package reports.

Capabilities

- **Reports Landing** — Five category containers (Financial, Membership & Package, Activity, Customer, Frozen Package).
 - **Financial Reports** — Total sales (orders), Sales by category, Payments, Gift card.
 - **Membership & Package Reports** — Memberships, Subscriptions, Packages.
 - **Activity Reports** — Bookings by class events, Bookings by customer, All cancellations, All no shows, All bookings, Instructor attendance.
 - **Customer Reports** — Attendance frequency, Retention, Active vs inactive users, Top services used, Referral.
 - **Frozen Package Reports** — All frozen packages, Freeze impact.
 - **Detail Page Chrome** — Each report opens full-bleed with a header, period filter, branch filter, chart, sortable table, and CSV export.
 - **Period & Branch Filters** — Standardised across every detail page so the same filter combo can be applied wherever you land.
 - **Module view** - 20 detail reports each with filters, charts, tables, and CSV export.
 - **Period + branch filter chrome unified across every report** — pick a window once and the same filter pattern is available everywhere.
-

2. Notifications

Your notification centre, surfacing every customer-facing event plus a Team activity feed across all studio roles.

Capabilities

- **Notification Bell** — Sits in the global header next to the search bar. Shows an unread-count badge and opens the notification panel.
 - **Notifications Page** — Full-page view with four tabs: All, Bookings, Payments, and Team activity. Each tab shows a count pill, and the active tab gets the bottom-border + bold treatment.
 - **Today / Past Sections** — Notifications are bucketed by day. Each row shows the featured-icon tile, title + relative time, body copy, and an unread dot on the right.
 - **Location Filter** — Inline with the first section header so the right edge stays aligned with the page chrome. Lets the owner scope the feed to "All locations" or a specific branch.
 - **Team Activity Tab** — Live-derived feed of every action performed across the studio: customer bookings + cancellations, sales + refunds, signups, attendance marking, class cancellations, and back-office actions (membership edits, freezes, comp credits, settings changes, payroll runs, pay-rate assignments, marketing, agreements, branding, branches, rooms, business hours, etc.).
 - **Empty States** — Per-tab copy that explains what each tab surfaces when there's nothing to show.
 - **Four-tab notification surface** - (All / Bookings / Payments / Team activity) with live count pills.
 - **Location filter** rendered inline with the section header to match the rest of the admin's chrome alignment.
 - **Team activity feed** derived live from every back-office mutation — covers admin + instructor + customer actions in one consolidated stream.
 - **Dashboard** "See all" button on the Recent activity widget deep-links straight into the Team activity tab.
-

3. Customer notification settings

Customer notifications

Settings > Customer > Customer notifications

Customer notifications		Agreements					
Membership renewal		☒	☒	Approved	☒	7d	⋮
Marketing & promotions							
Studio announcements		Sent during campaigns	1 branch	☒	☒	Approved	⋮
Forma Studio (South) override				☒	☒	Approved	⋮
+ Branch overrides							
New class launch		Sent during campaigns	1 branch	☒	☒	Approved	⋮
Forma Studio (South) override				☒	☒	Approved	⋮
+ Branch overrides							
Special offers		Sent during campaigns		☒	☒	Rejected	⋮
Promo code offers		Sent during campaigns		☒	☒	Approved	⋮

Your control surface for which customer-facing events fire on which channels, and the message templates they send.

Capabilities

- **Notifications Table** — Top-row column headers: Notifications | Email | WhatsApp | Push.
- **Five Collapsible Sections** — Booking, Payment, Package & membership, Marketing & promotions, and Customer profile. Each section groups its related events under a chevron + category icon + name accordion.
- **Per-Event Channel Toggles** — Each event row has a toggle per channel (Email / WhatsApp / Push) so the admin can decide exactly which channel sends which event.
- **Template Editor** — Every event has an "Edit template" button that opens a centred modal. Switch between Email and WhatsApp tabs (when both channels are supported), edit the subject line + body copy, save back into the per-event template store.
- **Live Channel Propagation** — Toggling a channel off immediately stops that event from firing through that channel for new actions.
- Per-event channel + template configuration table.
- Five-section accordion grouping that mirrors the event categories the rest of the admin already uses.
- **Template editor** with subject + body fields per channel, saved live to the per-event template store.

4. Booking rules

Your rules workspace for everything that governs how customers can book and cancel classes.

Capabilities

- **Classes Summary** — Studio-wide class-booking ground rules at the top of the page: default capacity, advance-booking window, waitlist behaviour. Inline edit with live preview.
 - **Cancellation & No-Show Policies** — Library of policies the studio runs (e.g. "Late cancel within 12 hours forfeits a credit", "No-show charges 50%"). Each policy shows its name, trigger window, refund / charge action, and assigned categories.
 - **Add / Edit Policy** — Configure a policy's name, trigger window (hours before class), refund mode (full / partial / none), and which service categories it applies to.
 - **Service Categories** — List of class categories (Pilates, Barre, Yoga, etc.) with their colour, status, and assigned policy. Add new categories as the studio's offering grows.
 - Three-card layout (Classes summary + Cancellation policies + Service categories) — a single page covers every booking-related rule.
 - Inline policy editor with live preview of the trigger window + refund mode.
 - Service category management with per-category status and colour assignment that propagates to the schedule.
-

5. Business & Locations

Your foundational workspace for the studio's identity, branches, and rooms.

Capabilities

- **Studio Profile** — The studio's display name, logo, contact email, address, currency, and timezone. Edits propagate to every screen that surfaces the studio's identity.
 - **Branches Table** — All branches with name, address, contact info, status, and a per-row action menu. Add new branches inline.
 - **Branch Detail** — Open any branch to manage its rooms, business hours, and status (Active / Inactive / Archived).
 - **Rooms** — Per-branch list of physical rooms with capacity and equipment notes. Used by the schedule module to assign classes to specific rooms.
 - **Add Location Dropdown** — Single green primary CTA that splits between "Add branch" and "Add room" with branch pre-scope.
 - **Live Cross-Module Sync** — Renaming a branch or room updates every dependent surface (schedule cards, POS branch picker, Reports filter) in the same render cycle.
 - Studio Profile + Branches table + per-branch Rooms management on a single landing page.
 - Single split-action "Add location" dropdown that scopes the new room to the right branch automatically.
 - Branch + room rename cascades to every denormalized field across schedule, POS, and Reports without a refresh.
-

6. Account settings

Your personal account workspace for managing the credentials and profile of the currently-logged-in user.

Capabilities

- **Profile Card** — Avatar + name + role pill at the top, with an "Edit profile" button that opens a modal to update display name + avatar.
 - **Change Email** — Three-step modal (verify current password → OTP → new email) so the email change is auditable.
 - **Change Phone** — Two-step modal (new phone → OTP) with country-code picker reused from the customer form.
 - **Change Password** — Single-step modal with current + new + confirm fields and inline validation.
 - **Profile Dropdown In Header** — The same account info + Sign out shortcut moved to the global header dropdown so it's reachable from every page without a sidebar trip. Single component shared between admin and instructor surfaces.
 - **Three secure flows** for email, phone, and password changes — each with OTP verification where appropriate.
 - **Profile dropdown moved into the global header** so account info + settings + sign out are one click away from anywhere.
-

7. Branding

Your brand identity workspace for the studio's customer-facing storefront.

Capabilities

- **Brand Identity Card** — Display name + logo + brand colour. Edits propagate to the sidebar logo, login screen, and any branded surface in the same render cycle.
- **Customer Portal Card** — Configures the live portal URL, navigation menu items, and the portal's display preferences. Two sub-pages (Portal config + Design config) accessible from the card.
- **Live Portal URL Chip** — Click-to-open badge that previews the customer-facing storefront (when wired). For this build it fires a "Customer portal isn't built yet" info toast, since the portal app ships in a future release.
- **Customisation Sub-pages** — Edit the menu bar items + portal-side design tokens (colours, typography) without leaving the admin chrome.
- **Live Cross-Module Sync** — Display-name + logo changes surface immediately on the sidebar header, login screen, and any branded surface across the admin.
- **Brand identity + customer portal** configuration on one landing page.
- **Live preview** chip for the customer-facing portal URL (toast placeholder for now).
- **Portal config + Design config** sub-pages reachable from the branding card.
- **Live cross-module** cascade so logo + display-name edits hit every branded surface in real time.

8. Feedbacks/Issue from previous release

What been updated:

- Dashboard Widgets, Allow drag-and-drop widget reordering
- Recurring Schedule, Update end date logic
- Preview schedule, Redesign preview experience (Add day grouping/view in preview, Define behavior for hundreds of generated classes)
- Custom date filter Schedule, Removing the custom date filters to simplify the interface.
- Class creation, create class schedule without selecting class template
- Edit class, add applicable membership & package while editing class
- Remove filter in POS
- Make the cart in POS default to be already show
- Remove the creation customer flow from the customer module
- Improve the customer creation in terms of (DOB, country input, conditional state, add warning for duplication customer)
- Remove the filter in Membership & packages
- Remove the filter in gift card
- Change the creation of customer in POS module to be side panel overlay, not a new page.
- Remove tax information from each package card or price row in Membership & package, so we show it on the column header
- Move profile or account settings to page header.

Important Notes on the Prototype

- **Interactive experience** — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
- **Live updates** — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
- **Session persistence** — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.

24/06/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 27/28

This update covers these modules:

- Categories module
- Service + appointment module
- General updates (update across several modules)

Note:

- Today's feedback from the meeting/docs is not tackled yet and push to the Vercel version today, we only push what we have done this week and the previous week. In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>"
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Categories module

Your studio's class taxonomy in its own module under the Classes nav group, separated from Booking Rules where it used to live. Every downstream surface (class schedule, templates, services, staff specialties, instructor schedule) reads from this single source of truth so a rename here propagates everywhere in the same render cycle.

Capabilities

- Module View — Table layout with bulk select, row action dropdown (Edit, Delete)
- Toolbar — Total count, search input, "Add new" primary button.
- Sortable Columns — Name + Status.
- Bulk Actions — Multi-select for bulk delete with a floating action bar.
- Add / Edit Modal — Image upload + name + status.
- Cross-module Cascade on Rename — Renaming a category propagates the new name to every class template, scheduled class, service, and appointment that references it. No stale display strings.
- Delete Guards — Refuses deletion when the category is still in use by templates, services, or instructor specialties — with a friendly toast naming the conflict.

2. Services + Appointments

Bookable services (Open session + Private) that auto-spawn appointment slots on the schedule grid. Adds a second track of bookable items alongside instructor-led classes, with appointment cards co-existing on the same list / day / week / month views.

Capabilities

- Service Catalog — Create / edit / deactivate / archive / delete service definitions with category, capacity, duration, applicable plans, branch location and instructor pool.
- Open Sessions vs Private — Open sessions allow multiple customers per slot, Private sessions are 1-on-1.
- Appointment Spawning — Services spawn appointment slots based on configured rules. Each appointment carries its own status (Upcoming / Ongoing / Completed / Cancelled) and roster.
- Schedule Grid Integration — Appointment cards render alongside class cards on list / day / week / month views.
- Customer Side Visibility — Appointment bookings appear in the customer's side for the entry point.
- Schedule filter - has a Group / Appointments single-select toggle to scope the view.

4. General Updates

POS

- "Add new customer" panel slides in/out with a 300ms easing motion.
- Module renamed from "Point of Sale" to "POS" everywhere — sidebar, header, route titles, and page chrome.

Filter motion (every side panel)

- All filter side panels across admin + instructor sides now slide in from the right and out cleanly with a 300ms easing curve.

Sort on every table

- Every list table now has tri-state column sort (desc → asc → off). Applied to: Pay rate, Payroll, Run payroll, Customers, Agreements, Tax, Categories, plus every detail-page sub-table — Customer Plan / Bookings / Payments / Agreements / Referrals tabs, Service Active customers, Membership / Package Active customers, Gift card Active customers, Pay rate Assigned instructors, Agreement Versions, and more.

Class schedule creation logic

- Instructor gating by category — Instructors whose categories don't include the picked category are disabled.
- Time gating by instructor availability — Date / time picker is gated by the picked instructor's shift hours AND blocked-time entries on the chosen date. Times outside the shift window or overlapping a block are unselectable. Instructors with no assigned shift fall back to the branch's working hours.
- Appointment-aware schedule — Class schedule grid + filter both branch correctly between classes and appointment-derived rows.

Pay rate

- Additional settings hidden for Flat rate — The two attendance toggles (Only count checked-in customers + Include late-cancelled customers) are hidden in the form AND the detail page when type = Flat.
- Tax rates hidden for UAE studios — When the studio's Business & Locations country is "United Arab Emirates," the Tax rate (optional) input is suppressed on create and edit. Other countries still see it.
- "View details" / "Edit details" wired — Assigned instructor row dropdown now navigates to the staff detail / edit page.

Terminology

- Every "Staffs" reference across the staff module corrected to "Staff".
- "Point of Sale" → "POS" across sidebar, header, page titles, and route titles.

Staff form (Instructor role)

- New Short introduction textarea field for the instructor's bio / intro line.
- New Categories multi-select dropdown — admin picks which categories the instructor teaches. Drives the category-gating logic in class schedule creation.
- Both fields surface on the instructor detail view as part of the Personal information section.

Class schedule filter

- Rebuilt to: Type (Group / Appointments single-select segmented toggle), Status, Time of day, Instructor (dropdown with avatar), Categories.

Customer module → customer details → Bookings tab

- Upcoming cards show Group or Appointment as a label beside the booked count.
- Booking history table has a new Type column.

25/06/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 27/28

This update covers these modules:

- Service & appointment (update)
- Business & location (update)
- Customer module (update)
- Staff & permissions (update)
- General updates (update across several modules)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>"
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Service & Appointment (Update)

Service detail pages now handle bookings the same way the schedule view does, and the customer roster on each appointment follows the same status rules as a class.

Capabilities:

- Appointment list appears on first booking — Service detail pages stay clean until at least one customer books. The moment a customer books, the appointment shows up in the table — same logic the schedule view uses for classes.
- Customer status column matches class schedule — Upcoming appointments hide the status column entirely. Ongoing appointments show the column with blank cells until you mark a customer Present. Completed appointments show Present or No-show on every row, just like a class schedule.

2. Business & Location (Update)

Simplified the working-hours setup when creating or editing a branch.

Capabilities:

- No more per-day blocked-time slot — When adding a branch, you only set open and close hours for each day. The previous "blocked time" mid-day slot has been removed

from branch setup, from admin schedule, and from the instructor schedule too. Fewer fields, less confusion.

3. Customer module (Update)

Waitlist position is now visible everywhere a customer's upcoming class appears.

Capabilities:

- Waitlist number on the badge — Upcoming class cards in the customer module bookings tab now show "Waitlist #3" instead of just "Waitlisted", so you can see how close a customer is to being promoted. Synced across every related view that surfaces a waitlist entry.
- Upcoming class can be clicked to see the class details

4. Staff & Permission (Update)

Roles are no longer locked to preset permissions. You can now build a custom role with custom permissions from scratch, but follow the predefined permissions on each role.

Capabilities:

- Editable permissions on role creation and edit — Previously, the permissions section was locked when creating or editing a role. Now you can fully customize the permission set, supporting cases like "create an Operator role with custom permissions." All cross-module references to roles continue to work with the new custom permission setup.

5. General Updates

- Click any table row to open — Every list in admin (customers, products, memberships, gift cards, agreements, branches, instructors, payroll, and more) now opens the detail page when you click anywhere on the row. The kebab menu still works for the row's other actions.
- Back returns where you came from — Every detail page now remembers where you opened it from. Close it and you go back to that exact page, not always the module list. For example: click a class card from the Dashboard's "Today's classes" and close it — you land back on the Dashboard, not the Schedule.
- Schedule and Staff & Shift fill the screen — Both the schedule grid and the Staff & shift module now fill the available screen height. Only the inner table scrolls. No more double scrollbars or fixed-height cards that crop on a tall screen.
- Global search is now an icon button — Moved global search from the wide search bar into a small magnifying-glass icon next to notifications. Click the icon to open the search panel. Saves header space.
- Consistent floating bulk-action bar — When selecting multiple rows for a bulk action, the floating bar now uses the same width and layout on every screen.
- Removed "Applicable on" card from membership and package detail — The reverse-link card that listed which class templates and services accept a membership. We only remove the UI but the logic is still the same.

26/06/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Staff & permissions - blocked time for instructor module (new)
- Pay rate (update)
- General updates (update across several modules)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Service & Appointment (Update)

Shift management and Blocked time are now fully developed. The Staff & shift menu is complete — every sub-tab and every action works end-to-end.

Capabilities:

- Shift management — Create, edit, view, archive, and assign shifts. Click any shift row to open its full detail. The "+ Add" button now wires through to a complete shift creation flow.
- Blocked time — Create and edit blocked time slots so each staff member's unavailable hours are accurately reflected across the schedule.
- Sub-tab navigation — Staff list, Shift management, and Blocked time all live in the same Staff & shift module with a single header. Switching between them keeps your search and filter state.

2. Pay rate (Update)

Simplified the pay rate setup for the Monthly salary type — same cleanup pattern we already had on Flat rate.

Capabilities:

- No "Additional settings" on Monthly salary — When you pick "Monthly salary" as the pay rate type, the attendance toggles ("Only count checked-in customers" and "Include

late-cancelled customers") no longer appear. The pay rate detail page also drops the Additional settings tab for monthly rates.

3. General Updates

- "POS" is now "Point of Sale" — Renamed every "POS" label across the admin (sidebar, page header, global search, schedule popup, reports, role permissions, confirmation modals, dashboard activity feed) to the full "Point of Sale" name.
- Fix some bugs and errors on the admin side that break the user experience.

29/06/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Sidebar (update)
- Schedule (update)
- Settings (update)
- Notifications (update)
- Service & Branches (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Sidebar (Update)

- New Marketing parent group with three children:
 - Campaigns (renamed from Marketing)
 - Promo codes (renamed from Promo)
 - Referral program (renamed from Referral)
- Settings + Profile chip pinned to the bottom footer of the sidebar in a single visual group.
- Single-winner active matching across the whole nav — fixes the bug where two rows from different parent groups would both light up.
- Brand renames propagated everywhere: Header titles, global search index, page copy.

2. Schedule (Update)

- Day view now renders Spa recovery appointments (Sauna / Breathwork / Massage / IV therapy). Previously, these cards were silently dropped because they have no assigned instructor.
- Class schedule creation hides the Spa branch from its Location picker (Spa is service-only).

3. Settings (update)

- Single 4-card layout (Studio / Operations / Customer / Platform) replacing the legacy long-list view.
- Referral program moved from Settings → Marketing sidebar group (single entry point — no duplicate paths).

4. Notifications (update)

- Mark all as read button on admin + instructor pages.
- Branch badge beside the timestamp on each notification row (when "All locations" is selected).
- Date buckets restructured to Today / Yesterday / Earlier this week.
- "Notification" → "Notifications" (plural) page title.

5. Service & Branches (update)

- Spa branch finalised as Forma Spa with id branch_forma_spa. All seed FKs (services, appointments, customer bookings, customer-side search mock) updated to match.
- Forma Spa business hours added
- Studio A (the only room at Forma Studio East) renamed to Hot Yoga Studio so customer-facing booking views read meaningfully.

30/06/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Business & location (update)
- Integrations (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Business and location (Update)

The settings screen where the owner manages the studio's legal identity, branches, and rooms. Now live in this demo.

Capabilities:

- Legal identity fields — Trading name, legal entity, tax number, billing address, and similar fields captured once at the studio level.
- Branch location scope — Each branch can be tagged as a club, a recovery spa, or both, so categories and services appear at the right location.
- Branch list and detail — Add, edit, deactivate, or archive any branch. Rooms can be added or edited per branch with their own opening hours.
- Forma Spa wired in — The recovery branch has full opening hours and shows up consistently across the schedule, services, and customer search.

2. Integrations (Update)

- Admin Integrations — Payments and Apps are now reachable from the Settings landing as a single page with two tabs. Cards, Cash, and Bank transfer ship enabled by default so POS and customer checkout have working payment options out of the box.

01/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Tax (update)
- Referral (update)
- Branding (update)
- General updates (update across several modules)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Tax (Update)

The settings screen where the owner controls how tax is applied across the studio, split by VAT and Income so each surface only shows what it needs.

Capabilities:

- VAT and Income tabs — One unified list for every tax rate, separated into a VAT view and an Income tax view so the owner sees only what's relevant.
- Three rate types — Default, Zero-rated, and Exempt as selectable cards. The amount field only appears when it makes sense.
- Per line item or per invoice — A single toggle decides whether tax is calculated on every line item or once on the invoice total.
- Apply tax rates — A clear "Services" parent card groups Memberships, Credit packages, and Appointments, with a separate row for Gift cards and Pay rate.
- Inheritance banner — A line at the top of Services reads the live VAT percentage so the owner sees at a glance what every category inherits.

2. Referral (Update)

The settings screen where the owner runs the rewards-based referral program end to end.

Capabilities:

- Master switch — A single toggle turns the entire referral program on or off, with a confirmation before the flip.
- Reward rules and limits — Side-panel editor that sets who the referrer earns, who the friend earns, the unlock trigger (sign up / first purchase / first class), the per-member referral cap, expiry days, and monthly program budget.
- Eligibility and fraud controls — Side-panel editor with four guard rails: prevent self-referral, new customers only, require minimum first spend, and credits redeemable across all branches.
- Customize referral information — Full-page editor with a title field, click-to-insert variables ({{referrer}} / {{friend}} / {{trigger}} / {{cap}}), a rich text editor, and a live preview of exactly what the customer will see.
- Customer detail Referrals tab — Three summary cards (referral code, total referrals out of the cap, total bonus credits earned), plus a sortable table with an Expiry date column so the owner can see when each referred reward runs out.
- Branch-locked credits — When "Credits redeemable across all branches" is off, the referred customer's credits are locked to the branch of the referrer. The customer detail Referrals tab surfaces a small amber line under each row so the owner sees the lock at a glance.

3. Branding (update)

The settings screen where the owner customizes the studio's customer-facing look and feel.

Capabilities:

- Three-step Customize design — Step through brand colors, typeface, and app icons. Each step shows a fitted phone preview that updates as the owner edits.
- Six fonts to choose from — Pick the typeface that fits the brand; the preview switches font live.
- Login, Home, and Class previews — Polished previews so the owner can confirm the brand reads correctly on the screens customers see first.
- Portal preferences sub-page — Toggles for the customer experience (light / dark default, social handles, support email).

4. General Updates

- Settings gear icon — The Settings link in the sidebar now uses the classic gear icon, making it easier to spot at a glance.
- Sidebar divider — The section break between the top of the sidebar and the studio-scoped modules is now a clean horizontal line instead of a "STUDIO" text label. Reads quieter.
- Roles & Permissions cleanup — The Export button was removed from the Roles page since role definitions aren't the kind of data owners typically export.
- Password history on admin Account settings — Same "Last changed" info line under the password value plus the Active sessions list, matching the new instructor Profile so both personas share one pattern.
-

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Booking Rules (update)
- Agreements (update)
- Payroll (update)
- General updates (update across several modules)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Booking Rules (Update)

The settings screen where the owner sets how customers can book classes, join a waitlist, and cancel — all in one place.

Capabilities:

- Booking window — Set how far in advance customers can book and whether to allow last-minute bookings right up to class start.
- Waitlist — Master toggle at the top of the card. When on, the owner sets the maximum waiting spots, what happens when a spot opens (auto add the next person or send a notification), and what happens after the auto-promotion cutoff (reopen for anyone, keep the waitlist order, or leave the spot empty). When off, the whole card collapses to a single row.
- Cancellation policy — Two-tab card with underline tabs: "Cancellation rule" shows credit and package member rules plus membership fee toggles at a glance; "Applied to" lists which packages and classes the policy covers.
- Live-linked windows — The "Match the free cancellation window" toggle in the Waitlist panel automatically reads the same hours as the cancellation policy.

2. Agreements (Update)

The settings screen where the owner manages liability waivers, terms, and any legal document members must sign before booking.

Capabilities:

- Redesigned list — New columns show branch coverage (which branches each agreement applies to) and adoption coverage (percentage of active members who have signed, with an amber warning when re-acceptance is needed).
- Effective dates — On create or edit, pick "Ongoing" (no expiry) or "Set an expiry date" (with issue + expiry pickers). Ongoing agreements display an "Ongoing" pill in the list and detail page; dated ones show the expiry date.
- Re-acceptance rule — When a new version publishes, existing signed members automatically flip to "Re-accept due" and are prompted to accept the new version before their next booking.
- Minors and guardian consent — Toggle a rule requiring a guardian signature for members under 18. Detail page shows the current state with a tooltip explanation.
- Acceptance status tab — Three summary cards at the top (Signed current version, On older version, Pending or never signed) followed by three sub-tabs (All signed, Needs re-acceptance, Pending or never). Each row has a "View" action that deep-links to the customer detail page.
- Customer detail Agreements tab — Status is now split into three distinct pills: Signed (green), Re-accept due (amber), Never signed (red). "Unsigned" has been renamed to "Never signed" for clarity.

3. Payroll (update)

The screen where the owner processes payroll for instructors and exports the payout data for their accountant.

Capabilities:

- Process Payroll modal — The summary now reads "Gross wages · Tax withholding · Net payout" with honest math (the three lines actually add up). Renamed from the old "Gross revenue / Tax rate / Total" that mixed studio and payroll concepts.
- Live tax withholding — The withholding percentage is read live from Settings → Tax → Pay rate rule. Change the rate in the Tax module and the payroll modal updates in the same render. No more hardcoded zero.
- Export enrichment — The CSV export gains three new columns so anyone can audit the calculation:
- Class rate (AED) — the AED-per-class figure that drove each row.
- Percentage (%) — filled only for Split Rate and revenue-split Hybrid rates. Empty for Flat, Tiered, Monthly, and attendance-bonus Hybrid rates.
- Notes / Explanation — a one-line plain-language breakdown with real numbers, for example "30% of AED 6,750 revenue + AED 15 × 45 customers = AED 2,700".
- Class revenue base column — The old "Gross revenue" column is now labelled "Class revenue base" across the payroll table, the metric card, and the CSV. It reads as the

reference figure that Split Rate calculations use, not the instructor's take-home. This matches the fix already made on the confirmation modal.

- Consistent naming across the screen — Table sortable header, top metric card, admin compensation landing card, and CSV all say "Class revenue base" together so nothing looks out of step.

4. General Updates

- Class revenue base everywhere — The "Gross revenue" wording that used to appear on payroll surfaces is renamed to "Class revenue base" on every payroll screen (Run payroll table, top metric cards, admin compensation landing, and the CSV export). Consistent naming, no more mismatch.
- Tax module now feeds Payroll — When the owner configures a Pay rate tax rule in Settings → Tax, the Process Payroll modal picks it up automatically. One place to edit, all screens update together.
- Shared side-panel patterns — The Booking Rules side panels reuse the same visual language and side-panel behaviour as the Referral module panels (slide-in from the right, edit-and-save, cancel to discard). Owners moving between modules find the same familiar chrome each time.
- Reusable list accordion — The "Applies to" list in the Booking Rules cancellation policy panel uses the same accordion pattern the Agreements form uses for applicable services. One pattern, consistent behaviour everywhere it appears.

03/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Customer Notifications (update)
- General updates (update across several modules)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-project.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-project.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-project.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Customer notifications (Update)

- Payment notification rows are now protected: the owner can turn any single channel off, but the last remaining channel stays locked on so a paying customer always gets told.
- The WhatsApp column, approval status pills, and the entire message template editor (Email / WhatsApp / SMS / Manage timing tabs) update live based on whether the WhatsApp Business integration is connected.
- Marketing category shows a live opt-in banner ("X of Y customers have opted in") that tracks the customer preferences above.

2. General Updates

- Three-group organisation — Every settings screen now sits under one of three tabs: Business (Business & locations, Branding), Operations (Booking rules, Tax, Integrations), or Customer (Customer notifications, Agreements). The tab bar sits at the top of each screen so the owner always sees where they are within the group.
- Sidebar dropdown — Clicking the Settings gear at the bottom of the sidebar opens a small dropdown showing Business, Operations, and Customer with their own icons. Same pattern as the profile chip.
- Tax module — Added a Tax Registration Number (TRN) card at the top of the VAT tab with the studio's TRN number, issuing country, and a toggle to show it on customer invoices. Every tax rate now carries an effective window (Valid from and Valid until)

shown as a new column on the list ("DD/MM/YYYY - DD/MM/YYYY" or "Ongoing" when open-ended). The Add / Edit tax rate screen picked up matching date pickers at the bottom.

- Agreements module — New Last signed column on the agreements list showing when each agreement was most recently accepted by anyone.
- Payroll — Instructor detail page renamed to "Payroll Details" so the title matches what the screen actually shows. Tax withholding on payroll is now country-aware: hidden for UAE, reappears automatically if the studio switches to a country that does apply income tax. The payroll CSV export now breaks each instructor down into typed rows (Pay model, Component, Basis, Rate, Amount) with an explicit Subtotal for multi-component pay models, replacing the free-text explanation column that used to be hard to read in Excel.
- Sidebar accordion — Clicking a menu that has a submenu now automatically collapses every other expandable group. Only one submenu stays open at a time so the sidebar reads clean regardless of where the owner is.
- Sub-menu hierarchy — Sub-menu rows sit clearly indented under their parent group with a consistent visual step, so which module a screen belongs to reads at a glance.
- Branch filter defaults — Every list module now defaults its branch filter to "All locations" — Customers, Promotions, Marketing, Schedule, POS, Dashboard, Pay rates, and In-app notifications all open on the aggregate view. Pick a specific branch when you need to drill in.
- Module renames — "Promo codes" is now "Promotions" everywhere the module surfaces (sidebar, page title, toolbar, toasts). The role label on the account/profile screen reads "Owner" instead of "Super admin" so the persona matches what the demo represents.

06/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashboard (update)
- Reports & KPI (update)
- General updates (update across several modules)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

- UI Polish, The dashboard interface has been updated and refined for a cleaner look based on client feedback

For the logic and data still on progress to develop, for now the UI is already done sofar.

2. Reports & KPI (Update)

- Reports still in progress for the backend so client cant access it for now and will see the 404.
- KPI is already mapping and in progress, same like reports its still on backend, so client cant access it for now and will see the 404.

3. General Updates

- Clearer Terminology: Renamed "Run payroll" to "Payroll details" and individual instructor views to "Instructor details" for a more intuitive navigation experience. Accurate Export Calculations — Fine-tuned the payroll export document so that all monthly salary totals and component numbers align perfectly, resolving previous layout confusion.
- Spa Location Staff — Instructors are now correctly assigned and visible within the Spa location.

- Strict Branch Filtering — Instructors are now accurately filtered by their assigned locations, ensuring a staff member from one branch cannot accidentally appear in another branch's roster.
- Membership Rules — Clarified customer profiles to ensure a customer appropriately holds only one active membership or multiple credit packages at a time.
- Unlimited Membership Cancellations — Updated booking rules to properly enforce maximum cancellation limits for unlimited memberships.
- Gift Card Notifications — Added a "Gift card purchase" toggle under payment notifications. When a gift card is purchased, the recipient automatically receives an email with their redeemable code.
- Waitlist Text Polish — Corrected typos and improved formatting in the waitlist settings, including fixing the cancellation window text.

07/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashboard (update)
- Customer management (update)
- Customer notifications (update)
- Business & locations (update)
- Insights (update)
- General updates (update across several modules)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

The owner's landing screen — three tabs that split the studio's numbers between what's happening now, what's coming up, and what's trending over time.

Capabilities:

- New "Coming up" tab — A third tab sits between Today at glance and Performance. Shows six look-ahead cards on a single row: Upcoming recurring revenue, Bookings ahead, Renewals due, Failed payments, At-risk clients, and Under filled classes.
- Next 7 / Next 30 days pill — A pill next to the location dropdown flips the window. Cards recompute instantly for either horizon; "Recoverable now" failed payments and "no visit 14-30 days" at-risk are always in view.
- Click through to the fix — Renewals due, Failed payments, At-risk clients, and Under filled classes each open the drill-through panel with the exact list behind the count. The other two cards stay read-only.
- Failed payment row goes to the customer — Any row in the Failed payments panel now opens that customer's Payment history tab directly, so the fix is one click away.
- At-risk row goes to the customer — Same pattern in the At-risk clients panel: click a row, land on the customer's profile.

- "Needs attention today" removed — The old list at the bottom of Today at glance is gone. The four attention items live on the Coming-up tab cards instead, so there's one place to look, not two.
- Counts always match the list — If a card says "5 failed payments" the drill-through panel shows exactly those 5, at both pill settings. Same for Under-filled classes and Renewals due.

2. Customer Management (Update)

The customer list + detail screen where the owner tracks each customer's plan, credits, and activity.

Capabilities:

- Credit left column — The Plan tab now has a "Credit left" column between Plan type and Status. A green progress bar fills to the amount left with the count on the right (e.g. "9/10"). Unlimited memberships show "Unlimited" with a full bar.
- Muted when finished — On Expired and Removed rows, only the Credit-left cell dims (gray text + gray bar) so the row still reads normally elsewhere. Frozen and Cancelled stay full-strength since they can still be acted on.
- Sidepanel matches the table — The "Total credits" summary card in the sidepanel now always equals the sum of the Credit-left column. If the table shows 12/12 the sidepanel reads 12 credits left, never 0.
- Real credit caps everywhere — Fixed an issue where some customers with an active membership showed "0/0" instead of "0/10". The real per-plan cap (10, 12, 20, or Unlimited) now flows through every screen that shows credits.

3. Customer Notifications (Update)

The settings screen where the owner controls every message the customer receives.

Capabilities:

- Critical on any event — A new "Condition" tab on the Edit template modal lets the owner flip any event to Critical, not just Payments. A Critical pill shows on the row header once it's on, matching what Payment events already do.
- Last-channel lock, everywhere — The rule that used to only guard Payment rows now guards every Critical row: the owner can turn any channel off, but the last remaining channel is locked. Trying to switch it off fires an amber toast explaining why.

4. Business & Locations (Update)

The settings screen where the owner manages branches, rooms, and working hours.

Capabilities:

- Enable moved into row actions — The dedicated Enable column on the Locations & Rooms table is gone. Enable and Deactivate now live in the row's kebab menu, matching how Memberships & Packages and Promotions work. Confirmation modals + the underlying logic are unchanged.
- Working days polish — Working days in the branch card render consistently. Days show red only when the owner marks them closed; days left open stay in the default colour.

5. Insights (Update)

The single analytics landing — one screen for every KPI the studio tracks.

Capabilities:

- KPI page becomes Insights — What was called "KPI" is now "Insights" in the sidebar. The old Insights page is retired; the Insights label goes to the new, richer surface.
- Four category tabs — Financial, Client, Class, and Marketing. Each tab carries its own set of KPI cards computed live from the studio's real numbers (transactions, bookings, plans, referrals, campaigns).
- Date range picker + search — Pick "This week", "This month", "Last 30 days" or a custom range from a dropdown. Every card recomputes for the range. Search filters the visible KPIs by name.

6. General updates (Update)

- Image banner size unified — Create and Edit screens on Class templates, Class schedule, Services, Promotions, and Campaigns all now show the image banner as a 4:3 tile with a compact right-side label and Upload button. Same layout everywhere.
- Card lists 4 per row — Class templates, Promotions, and Campaigns show four cards per row instead of three, so the grid fits more without extra scrolling.
- Compact date on Promotion + Campaign cards — "Valid until" now reads "31/12/2026, 12:00 AM" instead of the long month name, so the cards don't wrap on the four-column grid.
- Categories moved to Services & pricing — The Categories submenu now sits under Services & pricing next to Memberships & packages and Services. Same page, cleaner grouping.
- Booking Rules waitlist copy tidy — The waitlist explanation reads "After cut off, a freed spot:" (dropped the trailing "to").

08/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashboard (update)
- Promotions (update)
- Role & permissions (update)
- Settings (update)
- Insights (update)
- General updates (update across several modules)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

The daily command center — today's classes, what needs attention, and quick stats for the studio.

Capabilities:

- Today / Coming Up / Performance tabs — The dashboard is organized into three tabs, and the tab bar now stays fixed at the top as you scroll down.
- Needs attention today — Back in the Today tab, with a tighter, strictly today-scoped list and more of the items that need action surfaced.
- Win-back message — A new pop-up to compose and send a win-back message to at-risk clients, ready to send.
- Add widget, centered — The Add widget dialog now opens in the middle of the screen.
- Under-filled classes tidy-up — Under-filled classes no longer clutter "Needs attention today"; in the Coming Up tab's under-filled list, the "Promote class" action is hidden.

2. Promotions (update)

Discount codes you create and manage for checkout.

Capabilities:

- Renamed to "Promotions" — Every "Promo code" label across the app now reads "Promotions" to match your wording.

3. Roles & Permissions (update)

Define what each staff role can and can't do.

Capabilities:

- Roles exist once — A role is a single permission set; you no longer see a separate copy per branch. The old branch column is gone.
- Branch chosen at assignment — You pick the branch when you assign a person to a role, not when the role is created.
- Unique role names — Every new role must have a distinct name, so roles are always tellable apart in the list.

4. Settings (update)

Studio configuration across Business, Operations, and Customer sections.

Capabilities:

- Section tabs stay fixed — The top switcher (Business / Operations / Customer) that changes the settings view now stays pinned as you scroll.
- Branding as a side panel — Customizing your brand design now slides in from the side instead of taking over a full page.

5. Insights (update)

Performance metrics across finance, clients, classes, and marketing.

Capabilities:

- Refreshed data — Updated the underlying sample data so the Insights cards and charts read accurately.

6. General updates (update)

- Quick actions on cards — Class template, promotion, and campaign cards now have a three-dot (⋮) menu for quick actions.
- Stability pass — Reviewed the admin side end to end so information stays in sync across screens as you create, edit, and delete.

09/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Referral (update)
- Customer module (update)
- Pay rate & payroll (update)
- Customer notifications (update)
- Class template, campaigns, promotions (update)
- General updates (update across several modules)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Referral (Update)

The full referral program — who earns what, when the reward unlocks, and how the program is performing.

Capabilities:

- Overview and Setup tabs — Overview shows program status, monthly budget progress, top referrers, and quick KPIs. Setup keeps the configuration (rewards, eligibility, member-facing copy).
- Two reward types — A referral reward can now be a Class Credit OR an Account Credit in your studio currency (AED). The Amount field switches its unit to "credit(s)" or "AED" based on the choice.
- Simplified triggers — The reward-release trigger reads simply as "Sign up", "First purchase", or "First class" — no long explanations under each option.
- Cleaner "Eligibility & safeguards" section — Renamed from "fraud controls" and every rule reworded to be easier to read.
- Top referrers list — Full paginated list of referring members. Click any row to open that member's profile directly.

2. Customer module (Update)

The member profile and everything about their plans, payments, and now account credit.

Capabilities:

- Live balance — The balance is calculated from the ledger — no separate stored number that can drift.
- Consistent Credit-left bar — In the Plan tab the "Credit left" bar is the same size on every row, whether the label reads "Unlimited" or "0/10".
- Cancelled plans styled like Expired — Cancelled plan rows now grey out with the same treatment as Expired ones.

3. Pay rate & Payroll module (Update)

Sales commission is now real — the system tracks recorded sales and shows earnings on the staff member's own profile.

Capabilities:

- Sales credited automatically — Every POS sale is credited to whoever is logged in when the sale closes. No manual "sold by" step needed.
- Commission on the staff profile — Non-instructor staff on a Monthly pay rate see a Sales commission card on their profile — packages and memberships broken down as "net sales × %" so any number can be traced back to the actual sales.
- Refund clawback — Refunding a sale in the same period reduces that salesperson's commission automatically.
- Instructor pay rates stay class-based — Instructors can only be assigned pay rates that carry no sales commission. The pay-rate dropdown hides Monthly rates that have commission set, so you can never assign one by accident.
- Fixed the broken link of 404, when we see staff details from payrate and close it it will show 404 and now its fixed.

4. Customer notifications (Update)

Tightened the copy in the Delivery hours side panel — same behaviour, less wordy.

Capabilities:

- Cleaner section header — "Set quiet hours" replaces the longer "Set a quiet window so members aren't messaged at unsociable hours."
- Fewer explanations — Redundant explanations under the toggles were removed. What stays is what matters.

5. Class template, campaigns, promotions (Update)

Capabilities:

- Make the card image to be 4x3 size ratio and not get affected if the screen is stretched out

6. General updates (Update)

- Codebase tidy-up — Cleared out legacy screens and duplicate data sources so the platform is leaner.

10/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashboard (update)
- Insights (update)
- Reports (update)
- General updates (update across several modules)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

The owner's daily overview — today's activity, performance, and the customers and classes that need attention.

Capabilities:

- Clearer Win-back Message — The win-back pop-up now reads simply: "No bookings since [date]. Holds [N] unused credits." — the reason a customer is flagged at a glance.
- Sales By Product Shows Money — Hovering the Sales by product chart now shows the sales amount in AED, not the item count.
- Ratings Only For Finished Classes — Upcoming and ongoing classes no longer show a rating (a class can't be rated before it happens); the Under-filled classes list drops the rating column entirely.
- One Heading On Coming Up — Removed the duplicate "What's ahead" text under the Coming up tab so there's a single, clean heading.

2. Insights (Update)

Studio performance at a glance — KPI cards and trend widgets, now filterable by location.

Capabilities:

- Cleaner Header — Removed the "Total KPIs" count line at the top so the page opens straight into the numbers.

- Location Filter — Pick a specific branch to see that location's performance, or view all locations together.
- Location-aware Widgets — Every chart and KPI card responds to the chosen location, so the whole page reflects one branch at a time.

3. Reports (Update)

The full reporting catalogue, grouped into categories, now with favourites.

Capabilities:

- Favourite Reports — A star on the left of each report marks it as a favourite.
- Pinned To The Top — Favourited reports jump to the top of their category, so the ones you use most are always first.
- Saved Between Visits — Your favourites stay put after a refresh or closing the tab.
- All Reports Complete — Every report in the catalogue is now built and available across all categories.

4. General updates (Update)

- Breadcrumbs On Every Page — Each inner page now shows a small path under its title (e.g. "Customers > Customer details (name)") so you always know where you are and can jump back a level in one click.
- Labels On Filter Dropdowns — Every filter dropdown now shows a short label above its options (Status, Date range, and so on) so it's clear what you're filtering.
- Non-working Days In Grey — On Business & locations and staff schedules, non-working days now show in light grey instead of red, so they no longer look like an error.
- Payroll Confirmation Renamed — The confirmation step when running payroll now reads "Payroll Details".
- Tidier Delivery Hours — Removed the extra note box in the Delivery hours pop-up under Customer notifications for a cleaner screen.

13/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashboard (update)
- Business & locations (update)
- Class Schedule (update)
- Customer notifications (update)
- Branding (update)
- Class schedule details/service details (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

The owner's daily overview — today's activity, performance, and the customers and classes that need attention.

Capabilities:

- Welcome Line Only On First Tab — The "Welcome, Forma Studio" greeting now shows only on the first tab. It's been removed from the Performance tab so the header stays clean when you switch views.
- More Breathing Room Under The Title — Added extra spacing between every page title and the breadcrumb underneath, so headers no longer feel crowded.

2. Business & Locations (Update)

Studio locations, each with their own hours, rooms, and now their own timezone.

Capabilities:

- Timezone Follows The Branch — When you add or edit a branch, the timezone is now derived automatically from the country / state / city you pick — no manual timezone dropdown to get wrong. Dubai branches read Asia/Dubai, Riyadh branches read Asia/Riyadh, and so on. Every screen that shows a class or appointment time now tags it

with the branch's timezone so an owner running multi-city branches never has to guess which zone a 9 AM class is in.

3. Class Schedule (Update)

The full week / month / list view of every class across every branch.

Capabilities:

- New Recurring Ends Options — When you create or edit a recurring class, the "Ends" section now offers three choices on one row: Never / On [date] / After [N] classes. Matches the Elly reference exactly. Picking "On" opens a date picker; picking "After" opens a small number input.

4. Customer Notifications (Update)

Every automated message that goes out to members — booking confirmations, class reminders, payment receipts, marketing.

Capabilities:

- Delivery Hours Modal Redesigned — The quiet-hours setting is now a single row: "Pause messages between [start] and [end]" with the on/off toggle beside it. Simpler to configure and easier to explain to staff.
- Admin ↔ Customer Preferences Wired — Any change a customer makes to their notification preferences on the customer app now reflects instantly in the admin's customer detail page (and vice-versa). Same data source on both sides — no more drift between what the customer set and what admin sees.

5. Branding (Update)

Studio identity — logo, colours, typography, portal preview.

Capabilities:

- Portal Preview Now Uses The Real Customer App — The Login / Home / Class preview tabs inside "Customize design settings" now render the actual customer screens, not a mockup. Change the primary colour, the tertiary tint, the typeface, or upload a logo, and the preview updates live as you scrub. Whatever you see is exactly what the customer will see once you hit Save.

6. Class schedule details/service details (Update)

The customer roster inside a specific class or service booking.

Capabilities:

- Context Pills On Each Customer — Each customer row on the class roster and the appointment / service roster now shows small badges next to their name so an admin or instructor can spot who's who at a glance. The badges are system-derived and prioritised — up to 2 show per row:
 - Birthday — the customer's birthday falls on the class / appointment date.
 - 1st class / 1st appointment — this is their very first booking.
 - Milestone — 10th, 25th, 50th, 100th, 250th, 500th, or 1000th class / appointment.
 - New Member — they joined within the last 30 days.

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Customer (update)
- Business & locations (update)
- Service, Recovery, private (update)
- Class Schedule (update)
- Dashboard (update)
- General updates (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Customer (Update)

A member's referral history and the rewards they've earned.

Capabilities:

- Two Reward Types — The single "Total bonus credits" number is now split into two: Class credit and Account credit, so you can see at a glance what a member earned from referring friends.
- Matching Money Style — Reward amounts now read in the same muted style as the Payment history tab, so figures look consistent across the profile.
- Correct Refund Signs — Refund and credit lines now show the right +/- sign, so a refund reads as a single clean amount instead of a doubled minus.
- The owner's daily overview — today's activity, performance, and the customers and classes that need attention.

2. Business & Locations (Update)

Studio locations — each a real physical branch.

Capabilities:

- No More "Spa" Location — The fake "Forma Spa" location is gone. The location list now shows only real studio branches (South, East, West). Recovery services relocated into Forma South.
- No Club/Spa Scope — The "Location scope" (Club vs Spa) picker is removed from the branch form, and the "Location scope" row is gone from the branch detail page. A branch is just a branch.
- Every Branch Can Have Rooms — "Add room" now appears on every branch. A new "Recovery Room" lives under Forma South for recovery/wellness sessions.

3. Service, Recovery, Private (Update)

Creating a bookable service (1:1 private or recovery/wellness).

Capabilities:

- Session Type Selector — creation for recovery & private still on progress
- Optional Room Selector — Step 3 (Location) now lists every active branch plus an optional Room dropdown (rooms of the chosen branch, or "No room"). A session can use a room or not — your call.
- Type Column — The services list swapped its "Recovery Yes/No" column for a clear "Type" column (Private session / Recovery & wellness).
- The full week / month / list view of every class across every branch.

4. Class Schedule (Update)

The daily operational calendar — one feed for classes, private sessions, and recovery.

Capabilities:

- Coloured Type Tags — Every session on the schedule now shows a coloured type tag next to its name: green Class, purple Private, orange Recovery. It appears in the list view (its own sortable "Type" column), the day and week cards, and the click popover.
- Three-Type Filter — The Type filter went from "Group / Appointments" to Classes / Private sessions / Recovery & wellness, filtering the whole calendar by session type.
- Every automated message that goes out to members — booking confirmations, class reminders, payment receipts, marketing.

5. Dashboard (Update)

Today's overview — now type-aware.

Capabilities:

- Type Filter — A new session-type dropdown sits beside the location picker (All types · Classes · Private sessions · Recovery & wellness). Selecting one re-scopes the session tiles + the sessions list.
- Today's Sessions (was "Today's classes") — The list now merges classes + private + recovery, each with its coloured type tag — so you see the whole floor, not just classes.
- Occupancy Split — Occupancy is the one metric that can't collapse into a single number (class fill, private-slot utilisation and recovery capacity have different denominators). On "All" the occupancy tile shows a three-way split (mini bars: Classes / Private / Recovery); pick a type and it shows that type's single %.

6. General Updates (Update)

- Schedule Is Top-Level — The old "Classes" nav group is gone; Schedule is now its own daily item near the top of the sidebar.
- Products & pricing — "Services & pricing" is renamed "Products & pricing" and holds Memberships & packages, Private sessions, and Recovery & wellness (the last two are type-filtered views of the services list, each with its own module title).
- Classes Setup Section — A new "Classes" section (below the studio divider) groups the class-structure setup: Templates + Categories.
- Separate Private & Recovery Menus — Private sessions and Recovery & wellness each get their own menu entry, opening straight to that filtered list with the matching page title and sidebar highlight.

15/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Compensation & payroll (update)
- POS (update)
- Marketing (update)
- Schedule (update)
- Service(Private/recovery) (update)
- Customer (update)
- Settings (update)
- General updates (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Compensation & payroll (Update)

How the studio pays its team — pay rates, sales commission, and payroll runs.

Capabilities:

- Commission & Bonus On Monthly Rates — A Monthly pay rate can now carry sales commission (a percentage or a fixed amount per membership, package, or gift card sold) plus a bonus that kicks in once the person passes a monthly sales target.
- Commission On The Payout Detail — Each person's payout page now shows a clear breakdown of the commission and bonus they earned for the period, next to their pay.
- Payroll Covers Every Role — The payroll list and the Run payroll flow now include all staff, not just instructors — anyone on a salary or earning commission shows up.
- Real Monthly Totals — A staff member on a monthly salary now shows their actual "Total earnings this month" (salary plus commission) instead of a blank AED 0.
- Tidier Payout Summary — The little earnings box on the payout page is cleaner and the page is now titled "Staff details" since it covers every role.

- Moved To The Right Place — The sales-commission summary now lives on the payout detail where pay is reviewed, rather than on the staff profile.

2. Point of Sale (Update)

The checkout screen for selling memberships, packages, and gift cards.

Capabilities:

- Credited-to Staff Picker — Checkout now asks who each sale is credited to. That attribution is what drives a staff member's sales commission, so it's a required choice before completing the sale.

3. Marketing (Update)

Announcements and campaigns sent to members.

Capabilities:

- Pick The Event To Promote — On an Event campaign using "Book an event", you now choose exactly which upcoming session the button links to, from a single-select list.
- Pick The New Class To Promote — On a New Class campaign, you choose one class launching within the next 7 days.
- Searchable Pickers — Both selectors have a search box, so a long list of sessions is quick to narrow down.

4. Schedule (Update)

The studio calendar of classes, private sessions, and recovery.

Capabilities:

- Simpler Type Filter — The schedule's type filter now reads plainly as Classes, Private, and Recovery.

5. Service (Update)

Creating a bookable service — a 1:1 private session or a recovery & wellness session.

Capabilities:

- Separate Create Menus — Making a Private session and making a Recovery & wellness session are now two distinct flows. The Private menu creates a private session, the Recovery menu creates a recovery session — no extra type picker to fill in, since the menu already decides it.

6. Customer (Update)

Member profiles and their activity across the studio.

Capabilities:

- Class-count Badges Only — On a member's class, private, or recovery detail, the badges now show only how many times they've attended (1st, 2nd, 3rd... and up, with no cap). The birthday and new-member pills are removed.
- Member-side Freeze — Members can now freeze their own membership, controlled by the studio's freeze policy.

- Freeze Reasons — Freezing a membership now captures a reason, both when a member does it and when a staff member does it.

7. Settings (Update)

- Freeze Policy — A new Freeze policy area lets each studio turn membership freezes on or off and manage the list of reasons members can choose from.
- Cancellation Reasons — The list of cancellation reasons is now managed inside Booking rules → Cancellation policy, and feeds both the admin and member cancel-plan screens.
- Portal Preferences As A Panel — "Portal preferences" in Branding now opens as a step-by-step side panel, matching the Design settings experience.

8. General updates (Update)

- Consistent Chart Hover Labels — Every dashboard and insights chart now reads money the same way on hover — clean "AED 15,000" figures, with the stray "(AED)" labels removed.
- Everything Stays In Sync — Changes flow correctly across all the updated screens: a sale, a freeze, or a pay-rate edit reflects everywhere it should in the same session.

16/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashboard (update)
- POS (update)
- Customer (update)
- Class Schedule (update)
- Compensation & payroll (update)
- General updates (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

The three-tab dashboard — Today, Coming Up, and Performance.

Capabilities:

- Type filter as pills — The session-type filter on Today is a horizontal pills row (All / Class / Private / Recovery) instead of a dropdown.
- Coming Up gets a type filter — Same pills as Today, so each session type shows its own card set. All shows Revenue / Bookings / At-risk clients / Expiring credits. Classes adds Recurring revenue, Expiring memberships, Under filled classes, Trials ending, and Occupancy. Private and Recovery show the slots-based Occupancy card.
- Renamed cards — "Upcoming recurring revenue" reads as "Recurring revenue", "Bookings ahead" reads as "Bookings", "Renewals due" reads as "Expiring memberships".
- Real delta chips — The green / red percentage change on Revenue, Recurring revenue, and Bookings now compares against the prior N-day window (matches the range pill). Was a fixed placeholder before.
- Payments collected over time — The Payments-collected widget carries the failed-payments count as a red chip in its header and small red bars under the collected

line. Click the chip to open the same Failed payments list the Coming Up tab uses; totals always match.

- Payments by source — Renamed from "Payments collected by source" for clarity. The other two payment widgets (status and by method) are consolidated into the merged Payments collected widget, so the finance corner of the picker is simpler.
- Intro to member funnel — Redrawn as three horizontal labeled bars (Tried an intro, Returned, Bought a plan) sized by client count. Bars can never exceed the previous stage, and the "% came back" / "% converted" pills between them show the drop-off cleanly.
- Add widget placeholder is polished — Sits beside the last widget when there's an empty column, drops to its own row when the grid is even. Widget cards in the same row now match heights end-to-end.

2. Point of Sale (Update)

Checkout for memberships, packages, and gift cards.

Capabilities:

- Referral credit at checkout — A member's account credit (from referrals, refunds, or manual grants) now appears as a toggle above the payment method picker. Turning it on applies the balance as a reduction — like a discount — and the remainder goes to the chosen payment method. The Wallet is no longer a standalone payment method.
- Consistent totals across screens — Cart total on the main POS page and the checkout page now use the same math order: Subtotal → Tax → Discount → Account credit → Total. What the cart shows is what the receipt shows.
- Tax on the receipt — The receipt now always shows the tax row, matching the transaction record on the customer's payment history.
- Icon matches payment cards — The Account credit tile uses the same 32×32 white-on-gray chrome as the payment method cards, so the two sections read as one visual language.
- Refunds restore the credit — Refunding a sale that used account credit returns the credit to the customer's balance. The balance shown on the referral tab, on POS next time, and in the customer app all reflect the change instantly.

3. Customer (Update)

Member profiles + list.

Capabilities:

- Wallet tab removed — The stand-alone Wallet tab on the customer profile is gone. Account credit is now part of the Referrals tab.
- Referrals tab shows live balance — The Account credit cell on the Referrals card shows the customer's live spendable balance, so the same number a cashier sees on the POS toggle appears here.
- Import button hidden — The "Import data" button on the customer list is hidden pending a proper migration flow build. Nothing else on the list changed.

4. Class Schedule (Update)

Class detail — roster and attendance.

Capabilities:

- One-click Present — On an Ongoing class, "Present" is a direct button in the row, not hidden inside the kebab. Click once and the button flips to a mint "Present" badge. A no-show is auto-flagged by the system, so there's no manual no-show button.
- Cleaner confirm modal — The bulk "Mark customers as present" confirmation uses the same primary button color as every other primary action in the app (matches "Add class").
- Service side matches — The private and recovery appointment detail pages have the same inline Present button + bulk confirmation modal, so class and appointment attendance flows feel identical.

5. Compensation & Payroll (Update)

How the studio pays its team.

Capabilities:

- Earnings match everywhere — The Earnings column on the compensation list, the payout column on Run payroll, and the Total earnings on Staff details all read the same number for the same staff, period, and branch. Same rule in the CSV exports.
- Real "Class revenue base" — The Class revenue base metric card sums the actual revenue from payroll entries instead of an estimated multiplier.
- Paid stays paid — Marking a Front Desk or Branch Admin as paid on Run payroll now correctly shows "Paid" on the compensation list too — the two screens no longer disagree.
- Refunds affect commission — A live refund of a POS sale now removes that sale from the seller's commission base, so next payroll's commission number reflects the actual net.
- Instructor earnings caption — The "vs ..." line under the earnings KPI on the instructor side matches the selected period ("vs last month" when the picker says This month, etc.) instead of always saying "vs last week".

6. General updates (Update)

- Dashboard heights aligned — Cards in the same row on the Performance tab stretch to match heights, so a shorter widget no longer leaves a visible white gap next to a taller one.
- Expiring memberships modal matches the card — The list opened from the Expiring memberships card shows exactly the members the card counted.

17/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashboard (update)
- Settings (update)
- Customer (update)
- Marketing & Promotions (update)
- General updates (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

The three-tab dashboard — Today, Coming Up, and Performance.

Capabilities:

- Rounded pills — The session-type filter (All / Class / Private / Recovery) on Today and Coming Up now uses rounded pill shapes for a softer feel that matches the rest of the app.
- Performance metrics renamed and period-scoped — The four metric cards on the Performance tab now read simply as Revenue, Members, Classes, and Bookings. Values reflect the selected range (this week / this month) instead of only today's number, and the small "vs" caption under each metric updates to match — "vs last week", "vs last month" — instead of a fixed label.
- Metric titles cleaned up — Every metric title across the three tabs no longer bakes in a time word like "today" or "week". The range picker at the top is the single source of truth for the period, so the titles read cleanly whichever range is selected.

2. Settings (Update)

Studio-wide policies and rules.

Capabilities:

- Freeze policy moved under Booking rules — The freeze policy is now the fourth section under Settings → Booking rules, sitting alongside the cancellation policy. The stand-alone Freeze policy tab is retired. The rules, per-branch override behavior, and charge-now flow are unchanged — this is a placement change only.
- Referral is one reward type at a time — The referral setup now enforces a single reward type — either Class credit or Account credit, not both. Picking one auto-selects the other and resets both amounts, so a credit-count value can never accidentally save as an AED value. A short hint on the panel spells out the rule for the admin.

3. Customer (Update)

Member profiles + list.

Capabilities:

- Password on the profile — The Sign in credentials section on the customer profile now shows a Password row, view-only for admin. Click the eye icon to reveal it. This is the same password the member uses to sign in on the customer app.

4. Marketing & Promotions (Update)

Campaign and promo builders.

Capabilities:

- Image size guide — Both the campaign creation form and the promotion creation form now show a semibold "Image size guide" label with a help icon next to the banner uploader. Hover the icon for the recommended dimensions and ratio, so the thumbnail lands crisp on the customer app instead of being cropped hard.

5. General updates (Update)

- Cross-module data sync polish — A pass of under-the-hood fixes so screens that read from shared data (payments, customer balances, referrals) always show the same number, whether you land on them from the dashboard, POS, or a customer profile.
- Cleaner sample data — No customer starts with both class credit and account credit at the same time — matches the studio's new single reward-type rule.

20/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashboard (update)
- Class schedule (update)
- Customer (update)
- Settings (update)
- General updates (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

The three-tab dashboard — Today, Coming Up, and Performance.

Capabilities:

- Merged Type + Locations filter — The session-type filter and the locations filter on Today and Coming Up now sit inside one shared dropdown, matching the pattern used on the Performance tab. Type is single-select, locations are multi-select, and picking "All locations" toggles every branch together.
- Needs Attention renamed — The "Needs attention today" section is now just "Needs Attention" — cleaner heading, same behaviour.
- Cards moved between sections — At-risk clients moved back to the Today section. The Occupancy card moved into Coming Up and was renamed Capacity used, so it reads as the coming week's utilisation. Trial-ending alerts moved into the Today section under Needs Attention.
- Trial ends opens a details modal — Clicking the "Trials end" row in Needs Attention opens a modal listing every member whose trial ends within seven days, with plan, days remaining, and a direct link to the customer profile so you can act on it right away.

- Cleaner widget layout — Every widget lost its subtext line, some titles were renamed for clarity, and duplicated widgets were merged so each metric appears once. The dashboard now reads as a scannable grid instead of a stack of labelled paragraphs.
- Six widget categories — The Widgets picker now covers Financial, Customer, Class, Private session, Recovery, and Marketing, with new widgets added under each. The Add widget flow lets you preview and drop any of them into the layout without leaving the dashboard.

2. Class Schedule (Update)

Studio-wide class schedule with location + session-type filters.

Capabilities:

- Filter sits with the other controls — The filter pill now sits inline with All locations, Search, Export, and the "+ Add new" button, so the toolbar reads left-to-right in the same order used everywhere else in admin.
- "+ Add new" button — The old "+ Add class" button is renamed "+ Add new" so it stays accurate as we add private and recovery session creation to the same flow.
- Simpler search placeholder — "Search class..." is now just "Search..." — matches the other lists in admin.

3. Customer (Update)

Customer list, profile, and add flow.

Capabilities:

- Cleaner Add customer form — The "Customer details" and "Address details" section titles have been removed from the Add customer form. The fields still group visually on their own, so the extra headings weren't adding anything and made the form feel longer than it is.

4. Settings (Update)

Studio-wide policies + operations.

Capabilities:

- New Migration & imports page — A new page under Settings → Operations lists the history of every data import into your studio — customers, memberships, packages — with the file name, uploader, row counts (imported vs skipped), status, and a download link to the invalid-rows report where relevant. Filter by date range and status. The "+ Import" button will open the AI-Agent uploader in an upcoming release.

5. General updates (Update)

- "Members" is now "Customers" everywhere — Every screen that said "Members" now says "Customers", so admin uses one word for the same thing across the whole app. No more mixing the two.
- Full admin audit pass — A cross-module sweep to catch stale copy, off-by-one counts, and mis-labelled columns from prior weeks. Nothing headline-worthy on its own, but the small paper-cuts across admin should be gone.

- Customer app updates merged in — This push also folds in the customer-side work from the customer-experience branch (waitlist claim-to-accept flow, live class status, spot-layout parity with the admin room layout, per-branch push toasts). Admin behaviour is unchanged, but the two prototypes now share one data floor — so a booking made on the customer app shows up on the admin roster in the same spot the customer picked.

21/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashboard (update)
- Class schedule (update)
- Private & Recovery (update)
- Settings (update)
- General updates (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

The three-tab dashboard — Today, Coming Up, and Performance.

Capabilities:

- Welcome, Forma Studio — The dashboard title now greets the studio by name at the top of the page. Editing the studio name in Settings → Branding updates the greeting instantly.
- Toolbar frozen with the tabs — The tab bar and its per-tab controls (type filter, locations, date range, add widget, export) now sit on one row that stays pinned at the top when you scroll — every control stays reachable while you scan the metrics.
- Global search moved to the dashboard only — The magnifying glass in the header now only appears on the dashboard. Every other page has its own scoped search, so the extra button was redundant elsewhere.
- Report renamed to Export — The Report button on the Performance tab is now Export, uses the same white chrome, and shows the download icon that every other list uses. Same CSV / PDF / Excel picker inside.
- Add widget promoted to the main action — The Add widget button on the Performance tab is now the green primary button and sits on the far right so it reads as the main action.

- Coming Up rebuilt — The Coming Up tab now shows a KPI tile strip that adapts to the picked session type, a stacked revenue chart per day (or per week over 30 days) split by session type, and a capacity heatmap showing how full each type is per period. Every block respects the type + locations + range picker at the top. Click a bar or a heatmap cell to jump to the schedule for that day.

2. Class Schedule (Update)

Studio-wide class schedule with location + session-type filters.

Capabilities:

- Hide the class image in the list view
- Multi-select Type filter — The Type section in the Filter panel now lets you pick any combination of Classes, Private, and Recovery so the schedule can show two or three session types at once.
- New session data with Ongoing and Upcoming statuses — Eight fresh classes were added starting tomorrow across morning, afternoon, and evening slots. Every one already has customers booked so you can test check-in and roster flows.
- Recurring ends is now a vertical stack — In the Add schedule form, the "Never / On date / After N classes" options now stack one per row instead of squeezing onto one line, so the date picker and count input have room to breathe.
- Auto-fill time across selected weekdays — In the Add schedule recurring flow, picking a start time on the first day now auto-fills the same time on every other selected weekday whose slot is still empty. If a picked time is unavailable on a specific weekday (branch closed, instructor unavailable, conflict), that day stays as "Select time" so you know to pick manually — every other day still auto-fills.

3. Private & Recovery (Update)

The two session-type modules that share the same list, scoped by session type.

Capabilities:

- Total label reflects the module — The "Total N services" line at the top of the Private sessions list now reads "Total N private sessions" and the Recovery & wellness list reads "Total N recovery & wellness". The generic "services" label stays on the umbrella Services list.
- Detail page title reflects the type — Opening a private session detail now shows "Private session details" as the page title (and breadcrumb). Recovery & wellness detail shows "Recovery & wellness details". Both replace the older "Service details" title.
- Add new button hidden on scoped views — The green Add new button now hides on Private sessions and Recovery & wellness lists so there's a single, consistent entry point for creating them.

4. Settings (Update)

Studio-wide policies + operations.

Capabilities:

- Freeze policy rebuilt — The Freeze policy panel under Booking rules now covers the full freeze workflow. Billing during a freeze picks between Pauses (payment date shifts) and

Stays on schedule (payment date stays, next charge is reduced by the frozen days).

Who can freeze picks between Members & admins, Members request-admins approve, and Admins only. New Minimum freeze duration input, per-reason exceptions

- Freeze approval flow — When Who can freeze is set to "Members request, admins approve", the customer's plan card reads "Request freeze" instead of "Freeze". Requests land as a Freeze requested pill on the customer detail Plan tab; a Review freeze request modal shows the requested dates + reason with an Approve or Decline (with an optional note) pair. Approving fires the freeze; declining sends the note back to the customer.
- Freeze notifications — When a customer freezes, both the customer bell and the admin bell fire. Three days before the freeze end date, the customer gets a heads-up ("Freeze ending soon"). At the end date, the plan auto-resumes; both sides get notified again.
- Frozen plans block new bookings — While a plan is frozen, class booking, appointment booking, waitlist claim, and admin walk-in booking all show a clear "You can book again on <date>" message and disable the confirm button. Existing bookings on the frozen plan stay valid.
- Per-branch overrides for marketing notifications — Under Customer notifications, the marketing rows (Studio announcements, New class launch, Special offers, Promo code offers) now accept per-branch overrides so a marketing message can go out to a subset of locations. The main row's channel toggles stay the default; overrides fine-tune specific branches.
- Breadcrumbs include the settings group — Every Settings sub-page now reads with its group tier — for example "Settings › Operations › Migration & imports" instead of just "Settings › Migration & imports". Same for Business & locations, Branding, Tax, Integrations, Customer notifications, and Agreements. Referral program and Account settings sit outside the tabbed groups and skip the group crumb by design.
- Referral Overview date filter — The Referral program's Overview tab now has a date period filter in a toolbar above the containers, so you can scope the overview KPIs to a specific window instead of always looking at all-time totals.

5. General Update

- Icon-only Filter, Search, and Export across every list — Every admin and instructor list toolbar (Customers, Class schedule, Products, Gift cards, Promotions, Marketing, Class templates, Categories, POS, Compensation, Payroll, Roles & permissions, Staff & shift, Business & locations, Tax, Agreements, Integrations, Insights, KPI, Instructor Schedule + Earnings, and every detail page with a roster or bookings table) now shows Filter, Export, and Search as square icon buttons. Hover shows a tooltip so admins know what each does. Search expands to an input when clicked and collapses back to an icon on blur — every other button stays icon-only.
- Sticky dashboard chrome — The dashboard tabs and per-tab toolbar sit on the same row and freeze together at the top of the page when you scroll.
- Booking guards on frozen memberships — Any new booking attempt (class, appointment, waitlist claim, admin walk-in) on a customer whose membership is

currently frozen is blocked with a clear "can book again on <date>" message. Existing bookings and history are untouched.

- Consistent tooltip vocabulary — Every hover tooltip in admin is the same style.
- Total Sales report renamed — On the Total Sales report, the title dropped the "(orders)" suffix and the grouping dimension previously called "Revenue category" is now "Sale category" — matches the actual grouping semantic.

22/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashboard (update)
- Class schedule (update)
- Private & Recovery (update)
- Promotion & Campaign (update)
- Customer Notifications (update)
- Settings - Freeze Policy (update)
- Staff & Shift (update)
- General updates (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

The studio's at-a-glance home — revenue, bookings, class activity, and now referral performance in one place.

Capabilities:

- Date & heatmap fixes — Filtering by month now works correctly across the dashboard, and the activity heatmap reads the right days.
- Split home filters — Class type and location are now separate filters, so you can narrow by one without touching the other.
- Referral chart — A new performance widget shows how referrals are trending alongside the other studio metrics.
- Info tips on widgets — Selected widgets now carry a small "i" you can hover for a plain-language explanation of what the number means.

2. Class Schedule (Update)

Create and manage classes, private sessions, and recovery & wellness bookings.

Capabilities:

- Calendar day overflow — When a day shows "+17 more", selecting it opens a modal listing every class that day; picking one opens that class's details.
- Delete the first timeslot — In the schedule creation flow (step 3), the first timeslot can now be removed, and doing so drops that day from the selection.

3. Private & Recovery (Update)

Standalone booking flows for one-to-one and wellness sessions.

Capabilities:

- Add new restored — The "Add new" button is back on both the Private sessions and Recovery & wellness modules.

4. Promotions & Campaign (Update)

Build and schedule promotions and announcements for members.

Capabilities:

- Correct image ratio — Campaign images now use the same aspect ratio as the customer side, so pictures are no longer cut off or cropped in the admin view.

5. Customer notifications (Update)

Manage the studio's outbound notification templates and delivery rules.

Capabilities:

- Sticky table header — The column header now stays fixed at the top as you scroll the list.

6. Settings - Freeze Policy (Update)

Control how members pause their memberships.

Capabilities:

- Corrected logic — The underlying freeze behaviour was reworked so fees, penalties, expiry dates, and booking blocks all behave correctly and consistently, whether a freeze is started by staff or by the customer.
- Rolling 12 months — The freeze limit now counts over a rolling 12-month window instead of a fixed calendar year.
- Cleaner copy — Removed the extra helper lines under the duration and freeze-limit settings; the titles alone now carry the meaning.
- Customers, not members — Every freeze-policy screen (and related pages) now says "Customers" instead of "Members".

7. Staff & Shift (Update)

Manage staff, their shift assignments, and time off.

Capabilities:

- Three-tab rework — The Staff, Shifts, and Time off tabs were all updated: staffing targets with an understaffed indicator, staff who can hold more than one shift, a read-only week view of assigned shifts, and a month calendar of time off with an overlap flag.
- Multi-day time off — Time off now covers a date range with a reason category, and a range that spans several days correctly blocks every day it covers across scheduling and booking.

8. General update

- Consistent toolbar order — Across admin and instructor, every module/page toolbar follows the same order: All locations, search, export, filter, then the primary action.
- Filter icon — The filter icon is now an up/down control everywhere it appears.
- Customers wording — "Members" now reads "Customers" across all admin and instructor screens.
- Verified freeze & staff modules — Both the Freeze policy and Staff & Shift modules were reviewed end-to-end to confirm the data, actions, and cross-screen updates all hold together.

23/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashboard (update)
- Analytics & insights (update)
- Staff & Shifts (update)
- AI Agent (update)
- General updates (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

The Owner's home page — headline KPI tiles at the top, six categories of widgets underneath, all filtered by the date range and location at the top of the page.

Capabilities:

- Sales vs Revenue Split — Sales counts the full price of everything sold in the period. Revenue counts what customers actually used — a package's price is recognised class-by-class as members book those classes, and a membership is recognised evenly across its months. Both tiles now show AED and update together as the date range changes.
- KPI Tooltips — Every KPI tile and widget carries a plain-language hover tooltip explaining what the number is and how it's counted (e.g. "No-shows ÷ booked spots", "Booked private slots ÷ available slots").
- Payments Overview — The old "Payments collected over time" widget is now called "Payments overview" and its tooltip calls out failed payments as a separate figure.
- Referral Program Widget Removed — The standalone Referral program widget is gone from the library. Nothing on the dashboard references it anymore.

- **Tooltip Copy Fixes** — Fixed a small mismatch where "Under-filled classes" was showing the no-show formula. Every widget's helper text now matches what the chart actually shows.

2. Analytics and insights (Update)

Second-level analytics page for the studio owner. Six category tabs, each surfacing the hero widgets for that area of the business.

Capabilities:

- **Six Aligned Categories** — The tab order now reads Financial · Customer · Classes · Private sessions · Recovery · Marketing — the exact same names and order as the Add-widget library on the Dashboard, so nothing feels renamed between the two pages.
- **Customer (Renamed From Client)** — What used to be called "Client" is now "Customer" across every Insights tab and every Reports category, matching the rest of the admin.
- **Private Sessions & Recovery Tabs** — Two brand-new tabs land here. Each shows the hero widgets already tagged for that category — utilisation, rebooking, top trainers on Private sessions; top services, bookings over time, attach rate on Recovery. Metric cards on these two tabs land in the next pass.
- **Same Filters Everywhere** — Every widget on every tab (including the two new ones) responds to the same date-range picker and the location dropdown at the top of the page.

3. Staff & Shifts (Update)

The scheduling side of the Staff module — visualise instructor coverage across the week and the month, assign shifts by dragging or by picking, and see conflicts before you create them.

Capabilities:

- **Multi-shift Assignment** — An instructor can hold more than one shift in the same day. Overlapping shifts on the same branch are blocked with a clear message; different branches on the same day are allowed.
- **Week View Rework** — Manage shifts directly in the week view. Click any cell to add a shift, drag to extend, and the calendar re-lays out immediately.
- **Month View Rework** — The month calendar mirrors the same interactions as the week view. Time-off and blocked time surface as their own visual band so the coverage picture is honest.
- **Branch-scoped Coverage** — Everything in the week and month views respects the current location filter. Switching branches re-scopes the calendar without a refresh.

4. AI Agent (Update)

The right-side assistant panel for the studio owner — walks through data migrations from a previous platform, and answers analytics questions on the studio's own data.

Capabilities:

- **Migration Flow** — Fully Figma-matched — The four migration steps (Source, Upload, Review & mapping, Summary) now render as chat bubbles with the correct step badges, dropdowns, and inline tables. The mapping grid's dropdowns actually save the user's picks; the mapping summary lists every column mapped or skipped with a coloured pill.

- Fullscreen Import Loader — After the user confirms the summary, the whole chat area turns into a "Checking & importing data..." screen until the import finishes, so it's obvious something is running.
- Single "Upload File" Source — The old placeholder platform chips (Mindbody, Glofox, ClassPass, etc.) are gone. The source step now shows one clear "Upload file" affordance.
- Attached File Joins the Chat — Uploading a CSV attaches a chip to the composer. The moment the user sends, the file chip visibly moves into the user's message bubble, so there's no confusion about whether it was received.
- Send With Only a File — The Send button lights up as soon as a file is attached, even with no typed prompt. The Agent picks up the file and asks what to do.
- AI Actually Sees the File — The migration prompt now passes the file's name, row count and column list to the model, so the assistant reads the attached CSV instead of asking the user to re-upload.
- Unified Question Panel — Any time the assistant needs to ask something (which branch, how to handle mapping, ready to import), it appears as a single vertical question card above the input. When it asks multiple things at once, they turn into a numbered pager — user answers step 1, then step 2 appears, and only after all steps are answered does the reply go back to the assistant.
- Live Studio Data — The Agent pulls all its context (branches, customers, memberships, packages, schedules, staff) live from the same studio state the rest of the admin uses. No hardcoded numbers.
- Polished Chat Surface — Gradient and pattern background, chat bubble corners, the docked composer width, and every dead placeholder link have all been cleaned up. The panel looks and behaves like a finished product.

5. General update

- Sidebar Spelling Fixes — "Role & permissions" is now "Roles & permissions" and "Pay rate" is now "Pay rates" everywhere in the sidebar, header, breadcrumbs, and global search.
- Gift Cards Moved Under Products & Pricing — Gift Cards is no longer a top-level nav item; it now sits between Memberships & packages and the Services rows under Products & pricing, where a purchasable product belongs.
- Reports Category Renamed — The Reports catalogue's "Client / Customer" category is now just "Customer" (same route, same reports).

24/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashboard (update)
- Analytics & insights (update)
- Staff & Shifts (update)
- AI Agent (update)
- Schedule (update)
- General updates (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to “<https://onra-poject.vercel.app/instructor/dashboard>” and for the admin side, please change it back to “<https://onra-poject.vercel.app/admin/dashboard>”, for the customer side please change the link to “<https://onra-poject.vercel.app/customer>”.
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

The Owner's home page — headline KPI tiles at the top, six categories of widgets underneath, all filtered by the date range and location at the top of the page.

Capabilities:

- Payments overview colour coding — Collected payments now read in green and failed payments in red, so the healthy-versus-problem split is obvious at a glance.

2. Analytics and insights (Update)

Second-level analytics page for the studio owner. Six category tabs, each surfacing the hero widgets for that area of the business.

Capabilities:

- Reworked metrics on every tab — The tiles on all six tabs have been restructured to match the latest feedback, so each number is grouped and labelled the way the studio reads it.
- Numbers follow your date range — Figures like active customers, subscriptions and intro offers now update with the period you pick instead of staying fixed.

- Filters on the tab row — The Location filter, Search and Date Period selector now sit on the same row as the tabs, matching the Dashboard layout, and the tab strip stays pinned as you scroll.

3. Staff & Shifts (Update)

The scheduling side of the Staff module — visualise instructor coverage across the week and the month, assign shifts by dragging or by picking, and see conflicts before you create them.

Capabilities:

- Assign a shift from any staff form — The Assign Shift step now appears on every staff create and edit form, not just for instructors.
- More than one shift per person — A staff member can hold several shifts at once; assigning one adds to their shifts rather than replacing them.
- Shifts stay in the right location — The shift picker only offers shifts from the staff member's own branch, and a staffer can't be placed on another branch's shift.
- Shifts respect the role — Assignable shifts follow the staff member's role, for every role except Owner.
- Shifts follow branch hours — When you create a shift, its days and hours follow the selected branch's operating days and hours.
- Working hours and pay rate on the profile — Every staff detail now shows the person's working hours and their default pay rate.
- Manage shifts from the Week view — Each card has an Unassign action with a confirmation and an Assign action filtered by branch, operating day, and non-overlapping times.
- Assign or remove a shift for one day — You can add or drop a shift on a single day without changing the rest of the week.
- View Schedule opens filtered — The View Schedule action opens the Schedule already narrowed to that instructor.
- Filters per tab — Each Staff & Shifts tab carries its own set of filters.

4. Schedule (Update)

The studio calendar for classes and appointments.

Capabilities:

- Follows the real date and time — The schedule now uses the current device date and time, so "today" is genuinely today. Scrollable instructor header in Day view — The Day view's instructor header scrolls sideways, so studios with a long list of instructors can reach everyone.

5. AI Agent (Update)

The right-side assistant panel for the studio owner — walks through data migrations from a previous platform, and answers analytics questions on the studio's own data.

Capabilities:

- Customer bookings show up here — An appointment booked on the customer app now appears on the Schedule and opens in Appointment Details, in real time.
- Flexible tag — A private appointment booked with "Preference: Flexible" — where the studio picks the instructor — is marked with a Flexible tag so it's easy to spot.
- Reassign the instructor — For a Flexible appointment you can reassign the instructor straight from Appointment Details, and the change carries back to the customer's booking.

5. General update

- "Staff & Shift" naming — The sidebar entry and headings now read "Staff & Shifts".
- AI Agent in the sidebar — A quick entry to the AI Agent sits in the sidebar footer, directly above Settings.

27/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- AI Agent (update)
- Schedule (update)
- Attendee (new)
- Staff & Shift (update)
- General updates (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. AI Agent (Update)

The in-app assistant that helps admins ask questions about the studio's data and migrate spreadsheets in. This update is mostly a stability and polish pass on top of the audit we ran end to end.

Capabilities:

- Migration accepts CSV, XLSX, XLS, PDF — Attach one of the four in Migration mode and it goes straight in. Everything else is politely refused right at the file picker.
- File type icons on attachments — Each attached file shows its real type icon (CSV, XLSX, PDF, etc.) in the composer and in the sent-message bubble, so nothing looks like a CSV when it isn't.
- Cleaner CSV parsing — CSVs with commas inside quoted values (addresses, notes, product names) now import correctly instead of splitting mid-cell.
- Upload size in sync — The file size limit the assistant enforces matches the one the server enforces, so a file that looks like it should go through actually does.
- Migration & Imports history — Duplicate entries no longer stack up in Settings → Migration & imports; each import lands as one clean row.

- Focused conversation flow — When you're in Migration mode, the assistant no longer stacks unrelated insight questions on top of your migration task, and long conversations don't loop when you close and reopen the panel.
- Sidebar chip context-aware — The AI Agent chip in the sidebar hides while you're already inside the AI Agent, so it doesn't point back at itself.
- Report export — PDF exports (Insights, KPI) no longer crash the conversation; they save straight to your device like CSV and XLSX do.

2. Schedule (Update)

The class + appointment planner. This update tightens the list view and cleans up appointment actions so admins spend less time hunting for the right button.

Capabilities:

- Flexible badge in class type column — Flexible appointments now carry a "Flexible" badge in the class type column of the schedule list, so the difference between fixed classes and flexible ones is visible at a glance.
- Upcoming and Past tabs — The schedule list gets Upcoming and Past tabs, reusing the same sorting behaviour the customer bookings list uses. Older classes stop cluttering the default view.
- Reassign inside appointment actions — Reassigning an appointment to a different instructor now sits inside the appointment's action menu, using the same add-customer modal pattern the rest of the module uses. One consistent way to reassign, no more hidden entry points.

3. Attendee (New)

Brand new module for taking attendance on the studio floor. Reuses the schedule module's calendar chrome so admins already know how it works.

Capabilities:

- Entry point on the schedule — A top-header button on the Schedule module opens the Attendee route. Same location, no navigation retraining.
- Day and Week views — The Attendee list borrows the same day and week views the Schedule module uses, filtered down to ongoing and upcoming classes only, and pinned to the device's current time so "today" is always right.
- Class details with attendee cards — Opening a class shows every attendee as a card. Marking someone present runs through a two-step Present → Success flow so the attendance is confirmed before it commits, and the attendee card shows a clear "Present" state afterwards.
- List, filter, and search — Standard filter side panel + search bar match every other admin module, so filtering by branch, class, or instructor works the same way it does everywhere else.

4. Staff & Shift (Update)

The staff directory + shift scheduler. This update is mostly quality-of-life on the pay rate wizard and the staff detail page.

Capabilities:

- Pay rate detail tab — The pay rate module gets a dedicated detail tab, so pay rate context (which instructors are on it, the current rate, notes) sits in one place instead of scattering across the module.
- Multi-config instructor pay rates during staff creation — When creating a new instructor, the pay rate step now supports multiple configurations in a single flow. No more back-and-forth to assign a second pay rate.
- Working hours default to branch hours — When a staff member has no shift assigned yet, the working hours block on their profile falls back to the branch's operating hours instead of rendering empty. Reads correctly on day one of a hire.

5. General update

- Sticky filters across admin — Once you apply filters on a list, they stay put when you open a detail page and navigate back. No re-selecting the branch and status every time you check a record.

28/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Schedule (update)
- Attendee (update)
- Staff & shift (update)
- Customer (update)
- Pay rates & payroll (update)
- Settings (update)
- Dashboard (update)
- AI Agent (update)
- Retail preview (new)
- General updates (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Schedule (Update)

The schedule grid across upcoming, ongoing, and past classes for owners, admins, and operators.

Capabilities:

- Spots column always visible — Spot count is shown consistently on upcoming and past schedules, so capacity reads at a glance whether the class is next week or last month.
- Empty rating placeholder — Upcoming classes show a placeholder in the rating column instead of a blank cell, so the table lines up cleanly with completed classes.
- Full booking list restored — Every class schedule now shows its complete booked-customer list; earlier a handful of entries were missing.
- Flexible tag tooltip — Hover the "Flexible" tag on a class to see what it means without having to guess.

2. Attendee (Update)

The customer-facing attendee view — schedules and class details as your members see them.

Capabilities:

- Opens on today — Attendee now lands on the current week and current day the moment you enter, no manual navigation needed.
- Current-week scope — Schedules shown reflect the current week only, matching what customers see in their own app.
- Consistent look — Attendee now uses the same tables, filters, and toolbars as the rest of admin, so the module feels familiar the first time you open it.

3. Staff & Shift (Update)

The shift management module for owners and admins.

Capabilities:

- Time-off blocks shifts — You can't schedule a shift on a day where a staff member has an approved time-off request, so the roster stays accurate.

4. Customer (Update)

The customer list, profile, and follow-ups tab.

Capabilities:

- Sticky profile tabs — Tabs stay fixed at the top while scrolling a long customer profile, so you can jump between Plan, Bookings, Follow-ups, Details, and other tabs at any scroll depth.
- Stage rules side panel — The "why this stage" explanation opens in a right-slide side panel instead of a clipped tooltip, matching the create-customer flow from POS.
- Richer sample customers — Sample data covers every lifecycle stage (Lead, Trialist, Active, Loyal, Churned, and more) so you can test filters and status transitions in one demo session.
- Lifecycle filter — Filter the customer list by lifecycle stage right from the toolbar.
- Staff & shift layout — Customer module now shares the same page layout as Staff & shift so navigation between the two feels the same.
- Table breathing room — Added left/right padding around the customer table so rows sit flush with the page chrome, matching every other list.
- One table for follow-up tasks — Open and closed follow-up tasks now share one table with a status column, instead of two separate lists.
- Correct follow-up column names — Follow-ups table headers now accurately reflect what's in each column.
- Follow-ups empty state centered — When there are no tasks, the message sits in the middle of the tab, not glued to the top.
- Total count on Follow-ups — Follow-ups tab shows "Total N tasks" like the Bookings, Payments, and Referrals tabs.
- Log-enquiry side panel — Logging an enquiry opens as a right-slide panel matching the POS create-customer flow, with a full-width Assign-to picker.

5. Pay rates & Payroll (Update)

Instructor pay rates and payroll runs for owners.

Capabilities:

- Default rate + per-session overrides — Every instructor has a default pay rate; you can add per-class and per-private-session rates on top when a specific session pays differently.
- Payroll uses the latest rates — Payroll runs pick up the current pay rate configuration, including recent per-class and per-private-session changes, so numbers are always current.

6. Settings (Update)

The Settings tab for customer sources and follow-up stages.

Capabilities:

- Cleaner page header — Removed the verbose description at the top; the page opens straight to the editable lists.
- Add-source / add-stage modal — Creating a customer source or follow-up stage now opens the same modal shape as adding a tax rate, so every editable-list module in Settings works the same way.
- Consistent delete confirmations — Deleting a customer source or follow-up stage now uses the same confirmation dialog as the rest of the app.

7. Dashboard (Update)

The owner and admin dashboard.

Capabilities:

- "Leads to follow up" empty state centered — When there are no leads to follow up, the message sits in the middle of the widget instead of the top.

8. AI Agent (Update)

The AI assistant for admins — general chat, migrate data, studio setup.

Capabilities:

- Floating trigger — Open the AI Agent from a floating tile in the bottom-right of every admin screen; one-line label on hover.
- Every customer searchable — Fixed an issue where the AI Agent couldn't find some existing customers (e.g. Ava Wright) even though they were in the studio data.
- Sidebar entry — Sidebar now shows a shortcut to the AI Agent alongside the floating trigger.

9. Retail preview (Update)

The upcoming Retail / Inventory module for physical products (apparel, supplements, equipment, and more) — visual preview only for this update.

Capabilities:

- Menu entry — New "Retail" sub-item under Products & pricing so you can see where it will live.

- List page preview — The list page shows the future layout: product image, name, SKU, category, price, stock, and status, with a floating bulk-action bar. Buttons and filters are visual only for now.
- Implementation plan finalized — The full plan for stock tracking, POS integration, customer portal shop, and reports is locked in and ready to build.

10. General Update (Update)

- Every side-menu action in the three-dot menu — Actions that live in the side menu (archive, deactivate, recover, delete) are also accessible from the three-dot menu on each row across every admin module, so you can act without leaving the row.
- Bulk-action bar fits all buttons — When multiple statuses are selected, the floating action bar auto-sizes to fit every button (Archive, Reactivate, Recover, Delete) instead of clipping the last one.

29/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Customer (update)
- AI Agent (update)
- Studio Setup (update)
- Retail (update)
- Payroll (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Customer (Update)

The customer list, profile, and follow-ups tab.

Capabilities:

- Cleaner customer cards — Cards now show the customer's photo, or clean initials when there's no photo, and the arrow sits inline with the status so each row reads straight.
- "Assigned to me" returns your customers — The "Assigned to me" chip now shows the customers assigned to you instead of coming back empty.
- Branch filters agree — The toolbar filter and the filter panel no longer clash; picking a branch returns the matching customers instead of an empty list.
- Reassigning moves the work too — Reassign a customer to a new owner and their open follow-up tasks move across with them.
- "Reached out" advances a lead — Marking a lead "Reached out" now moves it to Contacted, as expected.
- Activity log names the real change — The log now says what actually changed instead of always reading "Edited customer profile".

2. AI Agent (Update)

The AI assistant for admins — general chat, migrate data, studio setup.

Capabilities:

- Searches your leads too — Ask about a lead and the agent finds it, searching your leads alongside your customers.
- Looks it up, never guesses — For any question about a specific record the agent checks your real data first, and tells you when it can't find something instead of inventing an answer. This now covers every kind of record — customers, memberships, classes, staff and more.
- Matches the admin's view — For the same customer, the agent shows the same lifecycle stage as the rest of the admin.
- Lead results don't dead-end — Lead rows in a result aren't clickable, so a lead search never lands on a "not found" page.
- Clearer, complete import messages — During a data import, confusing "0 imported" notes are replaced with clear next steps, and every message now shows properly instead of appearing blank.

3. Studio Setup (Update)

The guided checklist that tracks whether the studio is ready to go.

Capabilities:

- Steps reflect your real data — A setup step now shows as done only when your studio data truly backs it — no more false "all done".
- Tighter referral and cancellation checks — The referral and cancellation-policy steps no longer show green by default; they turn green only once they're really set up.

4. Retail preview (Update)

The upcoming Retail / Inventory module for physical products (apparel, supplements, equipment, and more) — visual preview only for this update.

Capabilities:

- Retail categories — Set up the categories that organise your retail products. The catalog, POS checkout and retail reports are being built next, so parts of this module are still in progress.

5. Payroll (Update)

Instructor pay rates and payroll runs for owners.

Capabilities:

- Flexible instructor pay rates — Instructors can be paid on any valid mix of a Default (base salary), Pay per class and Pay per private; other staff keep the simple Default pay rate.
- Safe pay-rate rules — At least one pay rate always stays on, and switching off the Default automatically keeps both Pay per class and Pay per private enabled — so an instructor is never left with no way to be paid.

- Bookings show only per-booking earnings — In Total bookings, a class or private shows its rate and earnings only when that per-booking rate is switched on; anything covered by the base salary shows "-" and AED 0.
- Complete earnings breakdown — Total earnings adds up every enabled pay rate plus any sales commission, with the base salary shown only in the breakdown — never doubled onto each booking.
- Same numbers everywhere — Staff Payroll Details, the earnings breakdown, Total bookings, Run Payroll and the exported payroll sheet all use one calculation, so the figures always match — and the export reflects the latest pay-rate setup.
- Simpler pay-rate summary — The staff payroll side panel and the Pay rate card keep it general, showing just the default pay rate.

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Customer (update)
- AI Agent (update)
- Retail (update)
- Staff & Shift (update)
- Settings (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Customer (Update)

The customer list, profile, and follow-ups tab.

Capabilities:

- Renaming a source stays clean — Rename a customer source and every record updates, with no leftover copies of the old name.
- Honest lead-status messages — Marking a lead "Reached out" no longer claims it moves to Contacted when it's already past that stage.
- Correct unassign log — Unassigning a customer now records "Unassigned customer" instead of "Reassigned customer".

2. AI Agent (Update)

The AI assistant for admins — general chat, migrate data, studio setup.

Capabilities:

- More prominent AI button — The floating AI button is easier to spot and lights up on hover.
- Reliable replies — Fixed an issue where the AI Agent failed to respond.
- Knows your whole studio — The AI now understands class management (templates, categories, ratings, rooms, branches), staff (members, pay rates, shifts, time off), studio settings (tax rates, agreements, cancellation and freeze policies, referrals, notifications), and customer plans and referrals.
- "What's interesting" scan — A new tool scans the studio and surfaces the biggest signals right now.
- Varied insights — Broad questions rotate across eight topics — Finance, Membership, Classes, Retail, Staff, Marketing, Lifecycle and Operations — so you get different angles instead of the same answer.
- Helpful when there's no data — A brand-new studio with nothing set up yet gets a setup guide instead of empty charts.

- Straight answers to specific questions — Ask for a specific detail and the AI answers it directly instead of only opening a profile card.

3. Retail (Update)

The upcoming Retail / Inventory module for physical products (apparel, supplements, equipment, and more) — visual preview only for this update.

Capabilities:

- The new module for selling retail products, taking shape now.
- Capabilities:
- Create and edit products — A full product form laid out in three parts: the steps on the left, the form in the middle, and a live preview on the right.
- Live preview — The product card preview updates as you fill in the form.
- Product detail page — Each product opens a detail page with a summary, stock by branch, and recent activity, organised into tabs with the actions kept in the sidebar.
- Stock management — Receive new stock and adjust stock levels, kept accurate for each branch.

4. Staff & Shift (Update)

Managing staff members, their shifts, and time off.

Capabilities:

- Side-panel creation — Adding or editing a staff member now opens in a side panel instead of a separate page, so you keep your place in the list.
- Simpler button label — The "+ Add New" button now reads "+ Add".

5. Settings (Update)

Studio configuration — the referral programme, booking rules, and customer notifications.

Capabilities:

- Tidier Referral layout — The Overview and Setup tabs now sit on the same row as the date filter, and the content fills the screen width.
- Full-width pages — Booking Rules and Customer Notifications now fill the available width, so there's more room to read and edit.

31/07/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- AI Agent (update)
- Retail (update)
- Insights (update)
- Attendee (update)
- Dashboard (update)
- Class Schedule (update)
- General update (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. AI Agent (Update)

- Retail import — The migration wizard can now bulk-import retail products AND retail categories, including per-branch stock in one CSV.
- Per-branch stock columns — A CSV with columns like "stock_Forma Studio (South)" / "stock_Forma Studio (East)" seeds units into each branch automatically.
- Handles Numbers.app exports — CSVs saved from Apple Numbers use semicolons instead of commas; the wizard now auto-detects the delimiter so those files import cleanly.
- Asks when unsure — If the AI can't tell which module a file belongs to, it now asks you to pick before it starts mapping.
- Downloadable invalid-rows report — Any rows that couldn't import now show as a clickable file in Migrations & imports. Hover shows a tooltip, click downloads a CSV with the failed rows and the exact reason for each.

- Real counts on the import summary — The wizard's step-4 preview now checks against your existing catalog, so a CSV with SKUs that already exist reads as "duplicates" up front instead of appearing to succeed then silently failing.
- Hides during bulk actions — The floating AI button now hides itself the moment you check a row for bulk actions, so it never covers the bulk-action bar at the bottom of the screen.

2. Retail (Update)

- Accordion table — Every retail row expands inline to show per-branch stock and per-branch units sold, without leaving the list.
- Sold column on Stock by branch — The product detail page's Stock by branch tab now has a "Sold" column next to units-on-hand.
- SKU-first create form — SKU sits at the top of the create/edit form, name second. The SKU auto-generates from the category prefix + product initials (e.g. "APP-OST-001") and shows a real value in the field from the moment you open the form. You can type your own to override.
- Live duplicate check — If you type or paste a SKU that already exists, the field turns red with the message right below — no submit-then-fail surprise.
- Inline "+ Create category" — Every place that picks a Retail category (the product form's category dropdown, the retail-categories admin page, etc.) has a "+ Create category" button at the top of the dropdown. Opens the same category modal without leaving the flow.
- Moved under Products & pricing — Retail categories now sits in the sidebar right under Retail (matching the Classes → Templates + Categories pattern), out of the deep Settings menu.
- Import stays visible on Retail — Retail bulk-imports happen often enough that the Import icon button stays visible in the toolbar even when the catalog has data. Every other module hides Import once it has rows.
- Round-trip export/import — CSV export now writes one stock column per active branch (stock_<Branch Name>), plus Unit cost, Description, and Image URL — so exporting, editing in a spreadsheet, and re-importing preserves everything without re-keying.
- Softer low-stock chip — The low-stock indicator switched from a red-adjacent orange to a lighter yellow, so it stops looking like a critical error.

3. Insights (Update)

- Tiles only — Every tab (Financial, Customer, Classes, Private sessions, Recovery, Marketing) shows just the KPI cards now. The chart-widget grid below the cards was removed — the Dashboard is where charts live.
- Same tab strip and filters — Location picker, search, and date range all still work exactly as before; only the widget grid was cut.

4. Attendee (Update)

- Now a right-side panel — Opening a class from Today's classes slides in a right-side panel with the roster, instead of pushing you to a separate full page.

- Focused on today — The main Attendee page drops the Day/Week toggle and the day picker. It shows today's classes only, with a clear date header at the top.
- Simpler class detail — Name-based title at the top, filter and tabs removed, "Present all" moved into flow. The list is a single "Participants" section with a search bar.
- Present state sticks — Once you've marked everyone present, the Present-all action goes away — no more re-marking the same class. The status also reflects instantly on the class schedule detail on the admin side.
- Opens in a new tab from admin — The class schedule detail on the admin side now has an Attendee tab that opens the full attendee flow in a new browser tab, so front-desk staff can leave the roster open on a second screen.

5. Dashboard (Update)

- Attendee shortcut — Every card in Today's classes now has a small "Attendee" button that opens the attendee roster panel for that class directly, sitting right before the "See all" link.

6. Class Schedule (Update)

- Attendee tab — The class schedule detail page gains an Attendee tab that opens the attendee flow for that class in a new browser tab. Marking present there reflects back on this page instantly.

7. General Update

- Empty-state Import on every list — When a list module is empty (no rows, no active filter), an Import icon button now shows in the toolbar right after Filter, opening the AI Agent's Migrate data flow. Once the list has data, the button hides and Add new is the only entry point — Retail is the exception where Import always shows.
- Consistent "Total" tile — Every list toolbar across admin, instructor, and detail-page inner tabs now uses one canonical Total tile — a small light-gray "Total" label above a larger dark count. Sizes were mixed before.
- 12-hour time everywhere — Every schedule and appointment time in the app now reads in the same "5:00 - 6:00 PM" format. Also applies to the customer app.
- Create category inline from every dropdown — Every class-category picker across the app (create/edit class schedule, private session, recovery & wellness, class template, and instructor's categories on the staff form) has a "+ Create class category" button at the top of the dropdown so admins never have to leave the creation flow.
- Dropdowns no longer clip — Dropdowns on long forms (Class category on private/recovery, class schedule, instructor categories) were getting cut off at the bottom of scrollable form cards. Now they always fit the visible area and scroll internally when the list is long.

03/08/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- AI Agent (update)
- POS (update)
- Insights (update)
- Dashboard (update)
- Retail (update)
- Reports (update)
- General update (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. AI Agent (Update)

- Create a class in chat (IN PROGRESS) — Ask the assistant to add a class and it walks you through template, room, equipment, instructor, spots, and timing, then publishes the schedule. Class schedules only for now; private and recovery sessions come next.
- Single or recurring — Set a one-off class or a repeating series — pick the days, times, start date, and how it ends — without leaving the chat.
- Confirm before it publishes — A clear "Are you ready to publish?" step appears above the message box so nothing goes live until you say so.
- Never covers the bulk bar — The floating assistant button now hides the moment you select rows for a bulk action, so it never sits on top of the bulk-action bar.

2. POS (Update)

- Gift cards work end-to-end — A gift card can now be bought and redeemed on both the admin side and the member app, front desk to phone.

- Shows in Payment history and can be refunded — A gift-card sale is a real transaction: it appears in the customer's Payment history and can be refunded as long as the balance hasn't been used yet.
- Commission on gift cards and retail — Gift-card and retail sales now count toward staff commission, alongside memberships and packages.

3. Insights (Update)

- Simpler revenue naming — "Gross revenue" is gone, and "Net revenue" is now simply "Revenue" (the same explanation still shows on hover).
- Classes tab tiles — Sales and Revenue now lead as the first two tiles, with Revenue per class as the third.
- Private and Recovery tiles — Both now lead with Sales and Revenue as their first two tiles.
- Respects your filters — Every tile updates correctly when you change the location or date range.

4. Dashboard (Update)

- Shorter tile names — On Today, "Total sales" is now "Sales" and "Total revenue" is now "Revenue".

5. Retail (Update)

- Products and categories in one place — Retail and its categories now live on a single page with "Products" and "Categories" tabs, matching the Memberships & Packages layout.
- Product sizes — A product can carry sizes — Small, Medium, Large, or any label you type. Stock is counted per size at each branch, and the cashier picks a size at checkout.
- Sizes on the product page — The product detail shows the sizes it comes in and a per-size stock breakdown for every branch.
- Location filter — Filter the retail list by branch to see one location's stock at a glance.
- Right branch stock at the till — The stock shown on each retail card in the Point of Sale now matches the branch you're actually selling from.

6. Reports (Update)

- Retail included everywhere — Reports, tax rates, and the related screens were updated so retail is fully covered across the board.
- Accurate totals — Retail sales are counted once, so revenue totals and the payments view stay correct.
- Clearer label — The "Transactions" measure is now "Line items".

7. General Update

- "+ Add" everywhere — Every "add new" button across admin and instructor now reads a simple "+ Add".
- Products & pricing reordered — The menu now runs Memberships & packages, Private sessions, Recovery & wellness, Retail, Gift cards.

- Simpler Private and Recovery lists — The status/category filter was removed from Private sessions and Recovery & wellness; search and location stay.
- Detail panels fit their content — The right-side info panel on detail pages now sizes to fit all of its info and actions, so both sides of the page stay the same height instead of scrolling.
- Smarter search — Search now handles hyphenated names (searching "Al Sayed" finds "Al-Sayed") and multi-word searches (searching "Forma East" finds "Forma Studio (East)").

04/08/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- POS (update)
- Products (update)
- Settings (update)
- Attendees and staff & permissions (update)
- Reports (update)
- Dashboard (update)
- General update (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-project.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-project.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-project.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. POS (Update)

- Sell private and recovery sessions — The catalog now has Private sessions and Recovery tabs alongside Memberships & packages, Retail, and Gift cards.
- Book while you sell — Choosing a private or recovery session opens a quick panel to pick the date, instructor, and time; completing the sale books the appointment and takes payment together.
- Right tax on each — Private and recovery are taxed separately, so checkout always applies the correct rate.
- One clean list — The whole catalog is now a single scrollable list of rows — image, name, details, and price — instead of a grid of cards.
- Familiar cart icon — The shopping-bag icon now matches the one in the member app.

2. Products (Update)

- Simpler menu name — "Products & pricing" in the side menu is now just "Products".

- "Packages" everywhere — "Credit packages" now reads simply "Packages" across the Memberships & Packages screens.
- "Location" column — The Memberships list column "Branch location" is now "Location", matching every other screen.
- Less to fill in — The welcome-message box is gone from the new-product form; that message already lives in Customer notifications.
- Collapsible branch pricing — When a retail product comes in sizes, each branch's stock in step 2 is now a section you can open and close, so a studio with many branches can hide the ones it isn't editing.
- Tidy categories — The leftover "Recovery" retail category, used only for testing, was removed to avoid confusion.

3. Settings (Update)

- Turn services on or off — A new Services page lets you switch off what you don't sell — Memberships, Private sessions, or Recovery — and everything tied to it hides across menus, the till, customer plans, and reports.
- Confirm before each change — Turning a service on or off asks you to confirm first, so nothing is hidden or brought back by accident.
- Shown during onboarding — New studios see these switches while setting up, so they only turn on what they offer.
- Clearer cancellation label — In Customer notifications, "Cancellation confirm" is now "Cancellation confirmation".
- Separate private and recovery tax — The single "Appointment" tax is now split into its own Private and Recovery rates, so each is charged correctly at checkout.

4. Attendees and Staff & Permissions (Update)

- New Attendees role — A role built for people who only mark class attendance, with a permission set matched to that job.
- Their own check-in app — Anyone assigned the Attendees role gets a simple, app for marking class attendance.
- Cleaner admin screens — The old attendee tabs and shortcuts were removed from the Schedule page header, the Dashboard's Today view, and the class, private, and recovery detail pages.

5. Reports (Update)

- Remaining credits now correct — On the Revenue recognition report, the Remaining column shows the credits still unused — a fresh 20-credit sale now reads 20, not 0.
- Cleaner time labels — A single month now reads "1 month" instead of "1 months".
- Fixed payroll export — The Basis column in the exported payroll file now fills in correctly instead of coming out blank.

6. Dashboard (update)

- Revenue & new customers — A new chart under the Financial tab plots revenue over time against how many customers are new to the studio, and follows your location and date filters.

7. General Update

- One name for Recovery — The app now says "Recovery" everywhere, instead of sometimes "Recovery & wellness" — one consistent name.
- Assistant button stays behind pop-ups — The floating assistant button now sits behind any open window or side panel, so it never covers what you're working on.

05/08/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- POS (update)
- Settings (update)
- Reports (update)
- Dashboard (update)
- Customers (update)
- Staff (update)
- Shift (update)
- AI Agent (update)
- General update (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. POS (Update)

- Auto-filled staff member — The logged-in staff member is filled in automatically as the person handling the sale, so it doesn't have to be picked each time.
- Payment as a side panel — Taking payment now opens in a side panel, matching the branding side panel in Settings, so checkout stays in place.

2. Settings (Update)

- One flat 5% VAT — Every service and retail item is taxed at a single 5% VAT to match UAE, so there's no need to set tax per item — the per-category tax tab is hidden and every sale still charges 5%.
- Gift cards taxed on use — Gift cards aren't taxed when bought; tax applies when they're spent, at the rate of whatever they're spent on.

- No payroll tax for UAE — The Income tax tab only appears for markets that charge payroll tax, so it's hidden for Dubai/UAE.
- Tidier tax list — The "Pay rate tax" row is removed from the Tax rates list for UAE; it returns automatically for an income-tax market.

3. Reports (Update)

- Export button matches the rest — The export button is now the same compact icon button used across the other modules.
- Clean export values — Fixed the stray "—" characters that were showing up in some export cells.
- Removed the unused Measure control — The Measure dropdown didn't change anything on the report, so it's been removed.
- Sales by Category — This report now groups by revenue category only, dropping the location grouping that wasn't needed.
- Cleaner sales rows — Sale items no longer show a redundant "x1" (quantity has its own column), and the sales channel now reads simply Online or POS.

4. Dashboard (update)

- Consistent revenue tooltip — The revenue tile's explanation now matches the one on the Insights page, so the two read the same.
- Cleaner today's sessions — Private and recovery sessions drop the "1/1 (FULL)" tag on Today's sessions.

5. Customer (update)

- Steady table columns — The Contact column keeps a fixed width, so sorting the customer table no longer shifts or resizes the columns.

6. Staff (Update)

- Staff and Shift split apart — Staff and Shift are now two independent areas, each with its own tabs, so managing people and managing time no longer overlap.
- Two tabs — Staff has a Staff list tab and a Staff schedule tab.
- Today's schedule at a glance — Every staff row shows a small bar of today's sessions with the shift name and time, and a Time Off marker on the days they're off.
- Tap through to the schedule — Tapping an instructor's today's schedule opens the Schedule with that instructor already filtered in, so you land straight on their day.

7. Shift (Update)

- Two tabs — Shift has a Shift tab and a Time off tab.
- Simpler shift list — The shift list now shows just the shift's own details; the staffing-count column and the assigned-staff day picker are hidden to keep it clean.
- Time Off as a list — The Time Off calendar view is hidden; time off reads as a straightforward list instead.

8. AI Agent

- Assistant bar on the right — The floating assistant bar now sits on the right of the screen.
- Create a class template by chat — The assistant can now build a class template for you from the conversation.
- Smoother publish — Fixed the loading screen shown after publishing a class so it completes cleanly.

06/08/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Shedule (update)
- Staff (update)
- Shift (update)
- Payroll (update)
- POS (update)
- Settings (update)
- Reports (update)
- AI Agent (update)
- General update (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Shedule (Update)

- One instructor list everywhere — The schedule list, the edit picker, and the "who can teach this" check now all read the same instructor data, so an instructor who appears in a class can always be selected when editing.
- Right instructor on every class — Each class is assigned an instructor who actually teaches that class type, is based at that branch, isn't on time off, and isn't already booked at that time.
- Sensible rooms and days — Every class sits in a room that fits its capacity, and nothing is scheduled on a day the branch is closed.
- Completed classes stand out with icon — When you do show them, completed classes are clearly marked so they read differently from active ones.

- Edits always hold together — When editing a class, the instructor and start time always stay filled, the correct branch, room, and spot layout are kept, and you can't save without an instructor.
- Changes flow through — Renaming or reassigning a staff member updates the schedule automatically, and reassigning a class moves its ratings and attendance to the new instructor.
- Checked end to end — All 85 classes, 523 bookings, and 25 ratings were verified across the admin, instructor, customer, and attendee sides with zero errors.

2. Staff (Update)

- Simpler Add button — Under the Staff menu the Add button is now just "+ Add" and opens the Add Staff flow directly, with no nested Add Shift or Add Time Off options.
- Today's Schedule as time slices — An instructor's Today's Schedule now shows time slices across their assigned shift — a 7:00 AM–12:00 PM morning shift shows five slots — filled blocks use the branch colour, and empty slots still show when there's nothing booked.
- Clear all-day time off — All-day time off now reads as plain text — "Time Off", the reason (e.g. Vacation), and "All day" — instead of a time bar.
- Jump to the day — Clicking an instructor's Today's Schedule opens the Schedule in Day View with that instructor already set as the active filter.
- Owner row cleaned up — The Owner row now offers View plus a new Account Settings action to edit the Owner's details, and the Owner's information stays consistent everywhere in admin.
- No shift step on new staff — Assign Shift was removed from the staff creation flow, since Staff and Shift are separate modules now.
- Matching detail actions — The actions inside a staff member's detail page now match the ones available from the Staff table.

3. Shift (Update)

- Focused Add menu — The Add menu now offers only Add Shift and Add Time Off; Add Staff was removed, since staff are managed in their own module.

4. Payroll (update)

- Salaries only — The payroll tax tab now lists salaries only — memberships, packages, retail, and gift cards no longer appear there.
- Charged on wages — Confirmed that payroll tax applies to staff wages, not to products or services.
- Two taxes, kept apart — Payroll tax on salaries and VAT (5%) on products and services are now clearly separated, and Candice's pay-rate mismatch was fixed so payroll figures and notifications match the schedule.

5. POS (update)

- One button at the end — After completing a transaction the receipt shows a single confirmation button instead of a second "Complete transaction", so you never confirm twice.

6. Settings (Update)

- Guest Bookings — Booking Rules under Operations gains a Guest Bookings section with toggles for "Members can use their plan for guests" and "Allow unlimited plans for guests".

7. Reports (Update)

- "Sales" report — The report previously called "Total Sales" is now simply "Sales".

8. AI Agent

- Faster replies — The assistant now reuses its saved instructions between messages, so answers come back quicker.
- Real data only — An end-to-end check confirmed the assistant reads from the same data as the rest of the app, with no made-up values anywhere.

9. General Update

- Refreshed look with new branding (in progress) — A new visual style is being applied across the app — starting with buttons, colours, and surfaces — and will continue over the coming updates.
- Update onra logo on all view

07/08/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashbord (update)
- Schedule (update)
- Products (update)
- POS (update)
- Settings (update)
- Reports (update)
- Staff & shift (update)
- Attendee (update)
- AI Agent (update)
- General update (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

- Click any metric — On the Today, Coming Up, and Performance tabs, every KPI card opens a pop-up listing the exact records behind the number — the sales, customers, bookings, or plans that make it up.
- Numbers always match their list — Each pop-up is built the same way as the card it comes from, so the total you click always equals the list you see.
- Filters carry through — Changing the location, the session type (Class / Private / Recovery), or the date period updates both the card and its pop-up together.
- Capacity used, by day — In Coming Up, the Capacity used section now shows the date under each bar, matching the Revenue section.

- Click to filter — Clicking a session type in the Capacity used section opens the schedule filtered to that type for that day.

2. Schedule (Update)

- No classes during time off — We audited and fixed every case where an instructor had an upcoming class on a day they're on time off; those conflicts are gone.
- No double-booking — Fixed sessions that were booked at the same time on the same instructor or room, across every session type.
- Cleaner list view — The "Flexible" badge was removed from the class list view to match the rest of the schedule.

3. Products (Update)

- One "Class" menu — Class templates and Class categories are now a single "Class" item with tabs, laid out like Memberships & packages and moved under Products.
- New menu order — The Products menu now reads Class, Private, Recovery, Memberships & packages, Retail, Gift cards.
- Shorter intro package name — The intro package label was simplified — the word "class" was dropped so the name stays short.

4. POS (update)

- Taller cart — The cart now fills the available screen height, so there's less scrolling during a sale.
- Simpler discounts — Promotion and Custom discount each use one field to apply or cancel, with the separate "applied" box removed.
- More compact payment — The "Detail payment" title is gone and the divider now sits above the payment section for a shorter layout.
- Sold from the right branch — A sale now counts against the branch where it happens, not the customer's home branch, so revenue and stock land in the correct place.
- Accurate out-of-stock — The out-of-stock check uses the selling branch's own units, so a branch that's actually empty can't be oversold.
- Safer refunds — Refunds only apply their effects once the status actually changes, avoiding accidental double-adjustments.

5. Settings (update)

- Guest Bookings as a panel — In Booking Rules, Guest Bookings now opens in a Customize side panel — the same pattern as Waitlist and Booking Window — and the main page shows it simply as Enabled or Disabled.
- Guest booking limit — You can now cap how many guest bookings are allowed, set with the same toggle-and-number control used elsewhere.
- Consistent wording — "Members can use their plans for guests" now reads "Customers can use their plans for guests", matching the rest of the app.
- Guests become leads — Adding a guest during booking now creates that guest as a Lead in the Customer module automatically, so you can follow up later.

6. Report (Update)

- Honest refunds — The Retail Sales report never rewrites past months; a refund shows as its own line in the period it actually happens.
- Cleaner stock report — Stock on Hand dropped a misleading Location column that made the numbers harder to read.

7. Staff & shift (Update)

- Matching scroll — Every tab in Staff and Shift now scrolls the same way as the Schedule — the page and the list scroll together, and the pagination stays pinned in place.

8. Attendee (update)

- Clearer class card — Each class card now shows the instructor's photo and name, plus a quick row of spots, room, and who the class is open to.

9. AI Agent (update)

- Now in the header — The assistant button moved from floating at the bottom to the top header, just before Notifications.
- New look — It uses the latest design with the updated Onra icon and brand colour.

10. General Update

- Refreshed look (rolling out) — The new visual style keeps rolling out across the app — buttons, colours, icons, and surfaces.
- Cleaner sample data — Every customer, staff member, and lead now has a unique name, email, and phone — no more duplicate names across the sample data.
- Tighter layouts — With the assistant moved to the top, extra bottom spacing was removed across screens, and each page now either fills the screen or hugs its content as appropriate.

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- AI Agent (update)
- Schedule (update)
- Staff & shift (update)
- POS (update)
- Attendees (update)
- Branding modules (update)
- General update (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. AI Agent (Update)

- New teal look — The assistant's glowing orb, chat bubbles, buttons, and charts now use the new brand colour.
- Updated logo — The assistant shows the updated Onra branding logo.
- Shimmer effect — The assistant button now shimmers, and it shows a shimmer while it's thinking.
- Clearer selected chat — The chat you're viewing in the menu now has a soft mint highlight, so it's obvious which one is open — it used to be almost invisible.

2. Schedule (Update)

- Confirm before cancelling an appointment — Cancelling a Private or Recovery appointment now opens a confirmation pop-up, just like cancelling a class, from the list, day, week and month views and the quick action bar — instead of jumping to the full details page.

- No refund toggle — The refund switch is gone from the cancel pop-up; when the studio cancels, the customer is always refunded automatically.
- Refund really returns the credit — A cancelled class now actually returns the credit to the customer's usable balance, not just marks it as refunded.

3. Staff & Shifts (Update)

- Password hint — The Temporary password field now shows "At least 8 characters.", and the app requires 8 or more — the hint turns red while it's too short.

4. POS (update)

- Clear "choose a customer" prompt — With items in the cart but no customer selected, checkout now shows a clear "choose a customer" message instead of a dead greyed-out button.

5. Attendees (update)

- Real instructor photo in details — The attendee details view now shows the instructor's real photo, with their initials as a fallback if they don't have one.

6. Branding modules (Update)

- Embed setup in Branding — A new "Embed website" screen gives you copy-paste embed code, a schedule-window setting, and a plain-English how-to guide.
- In-place booking — Visitors log in, book, and reach a "booking confirmed" screen without ever leaving the embed; every booking writes straight through to the admin and customer sides.
- Full classes and guests — A full class automatically offers the waitlist, and guests who book through the embed are saved as leads for follow-up.

7. General Update

- New brand colour (rolling out) — A new teal brand colour now runs across admin, instructor, attendee, customer, and the embed widget — no old green left anywhere.
- Brand colour for positive states — The Present button, the Active / Completed / Attended / Paid badges, up-trend numbers, and the Class tag now use the brand colour; errors stay red and warnings stay amber.
- One background setting — The background behind the white cards is a single setting — change it once and every screen, plus the sidebar, updates to the same warm shade.

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashboard (update)
- Insights (update)
- Reports (update)
- Customer (update)
- Class Schedule(update)
- General update (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-project.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-project.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-project.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

- Sales vs Revenue, defined clearly — Sales is the full value of what's sold; Revenue is the value of credits actually used. The two now mean the same thing on Today, on Performance, and in Reports.
- Renewals count matches its list — The "up for renewal" card and the pop-up it opens now show the same number.
- Every widget runs on live data — Revenue, sales by product, memberships, credits, class bookings, attendance, private and recovery, and marketing charts are all driven by real studio activity and follow the location and date filters.
- Clearer widget — Long labels no longer overlap, and a chart shows a friendly "no data" message when a filter has nothing to show instead of an empty box.
- Tidier Today view — Removed the redundant time shown next to each session.

2. Insights (Update)

- Every number is real — All the metric tiles are calculated from the studio's actual data and follow the location and date filters.
- Corrected figures — Recurring revenue, average revenue per member, active-member counts, waitlist conversions, and the private and recovery figures are now accurate.

3. Reports (Update)

- Only settled payments count as sales — Failed and pending payments no longer inflate sales totals or the tax figures.
- Accurate revenue recognition — Packages bought in multiples and each plan's real term are now counted correctly, and the Revenue Recognition report reflects real earned revenue.
- Safer product deletes — A product with any history can only be archived, never deleted, so past records stay intact.

4. Customer (update)

- No Status column — "Active" told you nothing (everyone in the list is active), so it's gone.
- Lead / Member / Inactive tabs — Grouped by the customer's wallet: a Lead has never bought anything, a Member has something live right now, and Inactive means they bought before but nothing is live today.
- Archived is a place, not a status — Archived customers leave the list, its counts, search, and campaigns, but keep their full history and their access is never touched. If they book again from their own account, they return automatically.
- Archived section on the list — Archived customers appear in a collapsible "Archived customer" section below the main list, matching its height with its own paging.

5. Class Schedule (update)

- Clearer cancel wording — Updated the message shown when cancelling a session, across every session type.
- Clearer cancel button — Updated the confirm button in the cancel dialog, across every session type.

6. General Update

- Collapsed menu fly-outs — When the sidebar is minimized, hovering a menu that has sub-items opens its list to the right so you can jump straight to a page.
- Referrals — "Referral program" is now simply "Referrals".
- New menu placeholders — Announcements and Events have been added to the menu; they open a "coming soon" page for now while they're being built.
- Cleaner AI Agent look — Removed the white circle behind the Onra logo in the "Ask AI Agent" button and the floating chat bubble.

12/08/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Dashboard (update)
- Reports (update)
- Marketing (update)
- Products (update)
- Staff (update)
- General update (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Dashboard (Update)

- Revenue reads "Earned" — Opening the revenue tile now says Earned, not accrued, since it's the actual revenue taken.

2. Reports (Update)

- Plain variance wording — Every report's comparison line now reads "vs previous day / week / month / quarter / year" instead of YoY/MoM abbreviations.
- Refunds read correctly — Refunds show as negatives in the Payments report; a voided sale is removed, while a refunded sale shows the charge plus a separate negative refund.
- Negatives in red brackets — Negative amounts show as (AED 170) in red across every report and the Excel export. Location on every report — All 16 reports carry a Location column so each row shows its studio when viewing all locations, and online purchases show a proper location instead of a blank.

- Stock per studio — Stock on Hand is tracked per studio, one row per product per location.
- Real discount data — The Discounts and Promotion Redemptions reports now use real data.
- Sales Breakdown — "Sales by Category" and "Sales by Item" are merged into one "Sales Breakdown"; it totals each item into a single row, groups by Item or Item Type, and the duplicate Memberships/Packages categories are fixed.

4. Marketing (update)

- Content type picker — Creating a campaign, you choose New class launch or Special offers, and that choice decides which channels — Email / WhatsApp / SMS — it goes out on.
- Honest reach count — "Will reach N" now counts only members who opted in to that topic and at least one channel, not everyone.
- Channels shown everywhere — The reach box, the "sent" toast, and the campaign detail all show the channels used, e.g. "sent to 919 customers via Push, Email, WhatsApp".
- Announce a promo — Promotions have an "Announce to customers" toggle; switch it on to send the promo as a Promo code offers message, and the promo detail shows whether it was announced.
- Announcements stay consistent — Announcements always send as Studio announcements with the same opt-in-aware counting, and editing an announced promo keeps its original date so it isn't re-sent as new.
- Reaches the member's bell — Announced promos appear in the member's notifications as their own row with a ticket icon, and the Updates feed only shows items a member opted in to.
- Reports always match — One performance record is saved per channel, so Reports, Insights and the dashboard widgets reflect exactly what was sent.
- Tidier forms and detail — The marketing menu was audited across all five areas with shorter helper text, and "Valid until" no longer shows on campaigns, which don't expire.

5. Products (update)

- "Single class" pack — The old intro pack is now called "Single class" and covers 2 or 3 classes.

6. Staff (update)

- Shifts and Time Off under Staff — Shifts and Time Off have moved out of the Schedule module and now sit under Staff, so all staff planning is in one place.
- Staff schedule shows classes — The staff schedule shows each person's shifts and classes as bars; hover a bar to see the full schedule details.

- Multiple shifts, no accidental clashes — A staff member can hold several shifts, but two can't overlap unless you deliberately choose to replace the conflicting one, and duplicate-shift assignment is fixed.
- Smarter shift confirmation — The period confirmation only appears for recurring shifts now — a single shift saves without it — and it uses a Weeks/Month dropdown to set how far ahead.
- Delete always confirms — Every delete shows a confirmation first, shifts included, which used to delete on the spot. "Shift Assigned" column — The staff table's "Today's Schedule" column is now "Shift Assigned".
- Accurate totals, cleaner list — Shift and time-off totals add up correctly, and the filter on the shift sub-menu is removed.
- Pay rate toggle and brand-colour cards — The pay-rate setup uses a clearer on/off toggle, and schedule cards use the newest brand colours.
- Simpler Time Off table — Columns are now Staff, Date & Time Off, and Note; Range and Reason no longer clutter the list.
- Reason kept in the form — You still choose a reason when logging time off — Annual Leave, Sick, Personal, Training, Religious Leave, or Other — it's just hidden from the table.
- Time-off metrics — A metrics strip on the Time Off tab shows Today, This Week and This Month at a glance.
- Consistent "Time Off" label — The calendar's time-off block now reads "Time Off" to match the rest of the app.

7. Operations (update)

- Cancel-membership control — A new setting decides who can cancel a membership — off by default, so members cancel their own; turn it on to require a reason and the customer's confirmation.
- Clear end-of-access message — When a membership is cancelled, the confirmation reads "Your membership ends 24 Aug. You keep full access until then."

13/08/2026

Onra Studio Prototype Update and Walkthrough

Overall modules done 28/28

This update covers these modules:

- Customer (update)
- Products Menu (update)
- Staff & Payroll (update)
- Schedule (update)
- Dashboard (update)
- Analytics & Reports (update)
- Settings (update)
- Marketing (update)
- General update (update)

Note:

- In the prototype, maybe you will see some 404 page; that means the page/module/feature is still being developed.
 - New side for instructor: to navigate to instructor please change the link to "<https://onra-poject.vercel.app/instructor/dashboard>" and for the admin side, please change it back to "<https://onra-poject.vercel.app/admin/dashboard>", for the customer side please change the link to "<https://onra-poject.vercel.app/customer>".
 - Interactive experience — This is a fully interactive prototype. Feel free to click, create, edit, and delete items to test the workflows.
 - Live updates — The prototype uses realistic sample data. Any changes you make apply live as you navigate between different screens.
 - Session persistence — Any data you create, edit, or cancel survives a page refresh and tab close. Your demo session sticks until you explicitly reset.
-

1. Customer (Update)

- Saved cards per customer — The Payments tab now shows that customer's own saved cards, with a clean "No saved cards" state when there are none.
- Complimentary credits — Granting or removing free credits now updates the balance correctly and records who did it.
- Safer delete rules — A customer with any history (bookings, appointments, or payments) can only be archived; a brand-new one can still be deleted.

2. Products Menu (Update)

- New sessions save correctly — Creating a private or recovery session now saves in the right state, so Edit, Deactivate, and Archive work on it right away.
- Retired plans stay out of pickers — Archived memberships and packages no longer appear when choosing which plans apply to a class.

- Right action for the situation — A product that's already been sold shows "Deactivate"; only a never-sold product shows "Delete."
- Gift cards are protected — Trying to delete a gift card that's already been issued now correctly stops and asks you to archive instead.

3. Staff & Payroll (update)

- Remove staff cleanly — You can now delete a staff member who has no history, and the owner account is always protected.
- Real performance charts — A staff member's Overview charts now show that person's actual classes, bookings, and attendance.
- Pay follows real attendance — Per-attendee pay now counts who was marked Present, not just who booked.
- Consistent contact details — Staff emails now match across the app.

4. Schedule (update)

- Real instructor ratings — The class-create screen shows each instructor's actual average rating and review count, or "No ratings yet."
- Live instructor filter — The schedule's instructor filter lists your current instructors, including newly added ones.
- Update Schedule module - under Day View, remove staff roles other than Instructor
- Update Schedule module - change "Total X classes" to "Total X schedules" since the Schedule module includes different schedule types
- Update Schedule module - under Day View, revert the role display to show the total schedule count as before
- Update Schedule module - remove instructor information from each schedule card since it is already shown by instructor

5. Dashboard (update)

- Today means today — The "Today's sessions" list now shows the actual day's sessions, matching the cards above it.
- Real numbers everywhere — Every tile, chart, and pop-up reads live from your real data.

6. Analytics & Reports (update)

- Runs on real data — The reports, refund calculations, and Excel/CSV exports all use your live data.
- Location filter fixes — The Insights "Referrals" and "Win-back" figures now respond to the Location filter like every other tile, and a placeholder trend was removed.

7. Settings (update)

- Cancellation policy now applies — When a member cancels a class, the app uses your configured free-cancel window and charges the late-cancel fee you set, instead of a fixed rule.
- Referral rewards for both sides — The referred friend now receives their reward on first purchase, and the monthly referral budget cap is respected.
- Correct branch details — The Locations list now shows each branch's real email.

8. Marketing (update)

- Smarter delete rules — A campaign that's already been sent can only be archived, keeping its stats, not deleted.
- Send-from-edit records results — Sending a saved draft now records its send, open, and click figures like a fresh send.
- Edits keep their details — Editing a campaign no longer loses its content type or original date.

9. General Update (update)

- Consistent "Archived" section — Across the admin (Customers, Staff, Plans & packages, Class types, Retail, Locations, Promo codes, Marketing, Announcements, Agreements, Services, Tax, Gift cards, Pay rates), archived items now tuck into a collapsible "Archived" section so your active list stays clean.
- Clear archive-vs-delete rules — Roles and Shifts are delete-only, scheduled classes are cancel-only, and anything with history can only be archived (never permanently deleted). A pay rate that's in use asks you to reassign staff before archiving it.
- Filters reset between modules — Opening a new module starts with a clean filter.
- Update bottom navigation side panel actions - use the same action component as Add Customer under the POS module across Admin and Instructor sides
- General update - reset filters whenever opening any module across Admin and Instructor sides
