1. Product Objective

Build a simple, elegant system for boutique studios to:

- Manage schedules (P1)
- Allow members to book and pay (P1)
- Track attendance and revenue (P1)
- Provide basic analytics (P1)
- Automate essential communication (P2)

The MVP prioritizes speed, simplicity, and operational accuracy.

2. Core User Groups

- Studio Admin / Owner (P1)
- Instructor (P1)
- Member / Client (P1)

Each will require a separate UI flow + permission set.

3. Core User Journey

3.1. Member Journey

- Sign up → verify email/mobile (P1)
- Browse studio schedule (P1)
- Filter classes (time, instructor, service type, level) (P1)
- Select class → view details → book (P1)
- Add paid service add-ons (roller, barre, props) (P2)
- Pay or use credits (P1)
- Receive booking confirmation (P1)
- Attend / cancel / reschedule (P1)
- Receive notifications (P1)
- Rate class & instructor (P2)
- View credits, membership status & purchase history (P1)

3.2. Admin Journey

- Create studio profile (P1)
- Add services, rooms, capacity rules (P1)
- Create class schedule (P1)
- Assign instructors (P1)
- Manage pricing, packages, memberships (P1)
- View bookings & occupancy (P1)
- Run reports (Reporting : Section 4.8) (P1)
- Manage instructors & user access (P1)
- Set marketing automations (P2)
- Handle cancellations, refunds, credits (P1)
- Manage Inventory (P2)

3.3. Instructor journey

- Login (P1)
- View weekly/monthly schedule (P1)
- View attendee list (P1)
- Mark attendance / no-show (P1)
- Read feedback (P2)

4. Feature Modules

4.1. Scheduling & Classes

- Create/manage recurring & single classes (P1)
- Provide class availability data including time, instructor, capacity and descriptions (P1)
- Add instructors (P1)
- Add rooms (P1)
- Add/Manage capacity (P1)
- Add class level (Beginner, Intermediate, etc.) (P2)
- Level-gating logic: unlock next level based on completed classes (P2)

Example:

- Clients are categorized into levels, such as 'Beginner' and 'Intermediate.'
- A client should only be able to book beginner-level classes until they meet a specific requirement—like completing 5 beginner classes.
- Once the requirement is fulfilled (e.g., 5 beginner classes completed), the system should automatically unlock access to intermediate-level classes for that client.

- Add pricing variations per service or class type (P1)
- Substitute instructor workflow: creating a simple process inside the system to replace an instructor for a class - without breaking the schedule, confusing members, or losing instructor-level reporting. (P2)
- Class waitlist (P2)
- Auto-fill Classes Based on Template: the studio can save a weekly schedule as a template, and then auto-populate future weeks with one click. (P2)
- Duplicate Class Feature. (P2)

Example:

- Admin wants to add a new 6 PM Pilates class on Thursday.
- Instead of creating a new class from scratch (add name, level, room, capacity, add-ons, instructor), they can select an existing class and duplicate it.
- Choose a new date and time and save.
- All other settings (class type, level, instructor, capacity, room, pricing) copy over.

4.2. Booking System

- Members can book/cancel (P1)
- Use credits / memberships (P1)
- Booking window open/close rules (e.g., 7 days before) (P1)
- Class capacity (P1)
- Add to calendar (Google, Apple) (P2)
- Waitlist with auto-promotion (P2)
- Late cancellation vs no-show logic (P1)
 - Credit consumed if late cancellation
 - Credit consumed if no-show

- Booking restrictions during freeze (P2)

4.3. Class Types & Formats (P1)

- Create and manage class types (e.g. Reformer Pilates, Barre, Rollers)
- Configure class type attributes
 - Default duration
 - Capacity
 - Equipment / room requirement
- Associate class types with pricing
 - Packages
 - Memberships
- Control where class types can be scheduled
 - Room-based
 - Location-based

4.4. Member Management

- Member Profile & Access
 - Profile (email, phone etc.) (P1)
 - Quick sign in (email OR mobile OR social login) (P1)
 - Emergency contact (P1)
 - Waiver form/liability agreement (P1)
- Membership & Activity
 - Membership/products purchase history (P1)
 - Upcoming & past bookings (P1)
 - Package Freeze (P2)
 - Level status (P2)
 - Referral code (P2)
- Member Wallet
 - Credit balance (P1)
 - Credit expiry dates (P1)

- Gift card balance **(P1)**
- Refund / adjustment credits **(P1)**
- Wallet transaction history **(P1)**

4.5. Notifications (WhatsApp/Email)

- Transactional Notifications
 - Booking confirmation **(P1)**
 - 24h reminder **(P1)**
 - Cancellation **(P1)**
 - Payment confirmation
 - Promotions **(P2)**
 - Package Freeze Notifications **(P2)**
 - Waitlist Promotion **(P2)**

Example:

- A Pilates Reformer class has 8 spots.
- 8 people book → class becomes full.
- Client joins the waitlist as #1.
- Someone cancels.
- System automatically promotes Client from the waitlist → into the class.
- Client receives → Email/WhatsApp: "You've been added to the 6 PM Reformer class"

- Channels:
 - Email **(P1)**
 - WhatsApp **(P1)**
 - Push notifications **(P2)**

4.6. Marketing Automation & Engagement

- Transactional Communications (System-Triggered) - These are automatic, non-optional messages tied to core actions.
 - Triggers:
 - Booking confirmation
 - Class reminder (e.g. 24h before)

- Cancellation confirmation
 - No-show notification
 - Waitlist promotion
 - Payment confirmation
- Channels:
 - Email
 - WhatsApp
 - Push notifications
- Controls:
 - Enable / disable per studio
 - Basic message templates (editable text only)
- Broadcast Communications (Admin-Initiated) – One-off messages sent manually by the studio.
 - Capabilities:
 - Send email to all members
 - Send email to predefined segments
 - Schedule send time
 - Use Cases:
 - New class launches
 - Schedule changes
 - Studio announcements
 - Holiday timetables
- Member Segmentation (System-Defined, Parameterized) – Admins use predefined lifecycle segments with configurable time thresholds.
 - Principles:
 - Segments are system-defined
 - Admins can adjust parameters only (e.g. number of. days)

- No custom logic combinations (no AND/OR trees) → Admins cannot build their own complex. The system decides the logic, admins only adjust simple numbers (timing).
 - Available Segments:
 - Active members
 - Inactive members (30 / 60 / 90 days)
 - Package holders
 - Membership holders
 - Members with expiring credits
 - Members who have never booked
 - Segments are used for:
 - Broadcast emails
 - Re-engagement messages
- Promotions & referrals
 - Promotions:
 - Create promo codes
 - Percentage or fixed discount
 - Validity period
 - Apply to packages or memberships
 - Referrals:
 - Unique referral code per member
 - New member applies code at checkout
 - Optional reward (discount or credit)
- Re-engagement Messages (Predefined Triggers) – Simple, single-step automatic messages.
 - Triggers:
 - No booking activity for X days
 - Credits expiring soon
 - Membership nearing expiry

- Each trigger sends:
 - One message
 - One channel
 - One time

4.7. Payments

- Stripe/Checkout.com (P1)
- Packages (P1)
- Class credits (P1)
- Memberships (P1)
- Refund logic (P1)
- Fraud & chargeback handling (P1)
- Auto-renew memberships (P2)
- Discounts / promo codes (P2)
- Apple Pay/Google Pay (P2)
- Freeze Controls for Packages & Memberships (P2)
- Gift Cards
 - Fixed or custom value gift cards
 - Assign purchaser / recipient
 - Redeem against classes or packages
 - Track balance and expiry
 - Deferred revenue until redemption

4.8. Reporting & Analytics

4.8.1. Class Performance

- Occupancy/Attendance (P1)
- No-show (P1)
- Late show (P1)
- On time cancellation (P1)
- Late cancellation (P1)

- Class by Instructor **(P1)**
- 4.8.2. Packages
 - Credits Used **(P1)**
 - Credits Remaining **(P1)**
- 4.8.3. Member Behavior
 - Attendance frequency **(P1)**
 - Retention **(P1)**
 - Active vs inactive users **(P1)**
 - Top services used **(P1)**
- 4.8.4. Sales
 - Total Sales (time of purchase) **(P1)**
 - Sales by package **(P1)**
 - Sales by service **(P1)**

Example:

- The Studio sells 10 packages in January
- Each Package costs \$500 and includes 10 class credits
- **Total Sales in January: 10 packages x \$500 = \$5,000**

Allocation Rules:

- To correctly allocate sales in a multi-location environment, the system must track where the service was purchased.
- Online Purchases → assigned to Online Sales bucket
- In-Studio Purchases → assigned to the specific studio (e.g., Studio A, Studio B)

- 4.8.5. Revenue
 - Revenue Recognition (as credits used) **(P1)**

Example:

- The Studio sells 10 packages in January
- Each Package costs \$500 and includes 10 class credits
- Only 8 credits were redeemed during the month
- Each credits is worth $\$500/10 = \50 per credit

→ *Total Recognized Revenue in January: 8 used credits x \$50 = \$400*

Allocation Rules:

→ *To correctly allocate revenue in a multi-location environment, the system must track where the service (credits) were used.*

- Deferred Revenue (unused credits) **(P1)**
 - This will show all the unused credits
 - Option to view with/without expired packages
- Expired package revenue **(P1)**
 - Expired package revenue is recognized when a package reaches its expiry date with unused credits.
 - Revenue from expired, unused credits is allocated to the studio where the package was originally purchased (point of sale), regardless of where credits could have been used.
 - Packages that are frozen do not generate expired revenue. Expiration and revenue recognition resume only after the package is reactivated.
- 4.8.6. Inventory & Retail **(P2)**
 - Retail sales
 - Stock levels → low stock alerts
 - Cost of goods
- 4.8.7. Frozen Packages **(P2)**
 - List of frozen packages with start end dates
- 4.8.8. Freeze Impact on Reports **(P2)**
 - Deferred Revenue
 - Deferred revenue remains unchanged during freeze since credits are unused.
 - Once the package is reactivated, deferred revenue behaves normally as credits are redeemed.
 - Revenue Recognition
 - No revenue is recognized during the freeze because no credits can be used.

- After unfreezing, revenue is recognized per credit used, following standard logic.
- Expired Revenue
 - Packages cannot expire while frozen.
 - After unfreezing, expiration resumes based on the new extended expiry date.
 - Remaining credits only enter expired revenue after the new expiry date passes.
- Freeze Behavior (P2)
 - Freezing a package pauses the expiration clock.
 - The expiry date is automatically extended by the duration of the freeze.
 - Frozen packages cannot be used until reactivated.
 - Frozen packages do not appear in expired revenue reports.
 - All freeze actions must be logged (date, duration, user, reason).
- Freeze Report
 - Report that shows the frozen packages by client

4.8.9. Filters

- Custom dates (calendar option) (P1)
- YTD, MTD, YOY (P1)
- By instructor (P1)
- By service (P1)
- By class type (P1)

4.9. Inventory (P2)

4.9.1. Retail Products

- Create retail items (water, socks, towels, etc.)
- Price
- Optional cost
- Stock quantity
- Low stock threshold

- Active / inactive toggle
- 4.9.2. Retail Sales
 - Sell retail items to members
 - Attach sale to member profile
 - Payment via existing payment flow
 - Stock automatically reduced
- 4.9.3. Inventory Adjustments
 - Manual stock adjustments (admin only)
 - Reason codes

5. User Roles

5.1. Admin

- Full access to schedules (P1)
- Revenue reports (P1)
- User management (P1)
- Instructor mgmt (P1)
- Inventory (P2)
- Marketing (P2)
- Payment settings (P1)
- Instructor Compensation Management
 - Fixed per-class pay
 - Per-attendee pay
 - Associate pay rules to class types
 - Attendance-based calculation
 - Export payout reports (no auto payouts)

5.2. Instructor

- View only: schedule (P1)
- View only: client list (P1)

- Mark attendance (P1)
- Respond to feedback (P2)
- Compensation visibility
 - View classes taught
 - View attendance-linked earnings summary

5.3. Member

- Basic booking flows (P1)

6. User Flows

6.1. Admin User Flows

6.1.1. Login (P1)

- Admin logs in
- Lands on Admin Dashboard

6.1.2. Create Class Type Template (P1)

- Go to Class Types → New
- Add name, description, level, duration
- Add default instructor, capacity, add-ons
- Save

6.1.3. Create Class Instance (P1)

- Click Schedule → Add Class
- Choose from template
- Select:
 - Date
 - Time
 - Room
 - Instructor
- Save → Publish

6.1.4. Duplicate Class (P2)

- Select class
- Click Duplicate
- Choose new date/time
- Save

6.1.5. Apply Weekly Template (P2)

- Select Template
- Choose date range
- Apply
- System auto-creates full schedule

6.1.6. Substitute Instructor Workflow (P2)

- Open class
- Click Change Instructor
- Choose replacement
- Confirm
- Notify instructor (and members if enabled)

6.1.7. Booking Management

- Add/remove member (P1)
- Promote waitlist (P2)
- Mark attendance
- View class-level stats (P2)

6.1.8. Products (Packages & Memberships) (P1)

- Go to Products → Add New
- Choose package or membership
- Set:
 - Price
 - Expiry
 - Credit count

- Publish

6.1.9. Freeze/Unfreeze Package (P2)

- Open Member Profile
- Select active package
- Click “Freeze Package”
- Enter freeze duration + reason
- System pauses usage and adjusts expiry
- Audit log updated
- To unfreeze: Admin clicks “Unfreeze Package” → package reactivates

6.1.10. Reporting (P1)

- Open Reports
- Select report type
- Apply filters
- Export CSV/PDF/Excel

6.1.11. Retail Sales Flow (P2)

- Open Member Profile
- Click “Add Retail Sale”
- Select product
- Select quantity
- Charge payment
- Stock updated automatically

6.2. Instructor User Flows

6.2.1. Login (P1)

- Instructor logs in
- Lands on Instructor Schedule

6.2.2. View Classes (P1)

- Day/week/month view
- See attendance list

- See add-ons
- 6.2.3. Mark Attendance **(P1)**
 - Present
 - No-show
 - Late cancel
- 6.2.4. Review Feedback **(P2)**
 - View class ratings & comments

6.3. Member User Flows

- 6.3.1. Sign Up & Login **(P1)**
 - Choose sign up method (email, mobile, social)
 - Verify
 - Create profile
 - Land on Browse Classes page
- 6.3.2. Browse Classes **(P1)**
 - Open class schedule
 - Filter by:
 - Date
 - Time
 - Instructor
 - Class type
 - Level
 - Room/service
 - Select class → view details
- 6.3.3. Book a Class **(P1)**
 - Select class
 - System checks:
 - Level eligibility
 - Credits/membership

- Select add-ons (if available)
- Confirm booking
- Credits deducted
- Confirmation screen + notification
- 6.3.4. Waitlist Flow
 - Class full → Join Waitlist
 - System assigns waitlist position
 - If spot opens → auto-promotion
 - Credits deducted
 - Confirmation notification
- 6.3.5. Cancel Booking **(P1)**
 - Go to My Bookings
 - Select class → Cancel
 - System checks cancellation policy
 - Credit refunded or forfeited
 - Next waitlist user auto-promoted
- 6.3.6. Viewing Frozen packages
 - Member sees frozen status in their profile
- 6.3.7. Member Profile **(P1)**
 - Update contact info
 - View credits, membership, history
 - View level progress
 - Payment methods

7. User Interface (UI) Requirements

7.1. Admin UI

- Dashboard with KPIs
- Calendar scheduler (weekly + monthly view) **(P1)**

- Class templates (P1)
- Reports module (P1)
- Product setup
- Retail product list
- Retail product create/edit
- Retail Sale modal inside Member Profile
- Inventory overview

7.2. Instructor UI

- Minimal, schedule-focused (P1)
- Large, easy-to-read attendee list (P1)

7.3. Member UI

- Mobile-first (P1)
- Clean schedule interface (P1)
- Filters at top (P1)
- Simple booking buttons (P1)
- Clear credit balance (P1)
- Notifications center

8. Backend & Infrastructure

8.1. Database Entities

- Users
- Instructors
- Classes
- Class Instances
- Rooms
- Services / Add-ons
- Packages
- Credits

- Bookings
- Payments
- Memberships
- Notifications
- Reviews
- Studio Settings
- Retail Products
- Inventory Adjustments
- Retail Sales

8.2. APIs

- Authentication
- Schedule
- Booking
- Waitlist
- Payments
- Notifications
- Reporting

8.3. Hosting

- Cloud-based (AWS, GCP, Azure)

9. Wireframes Required

9.1. Global (Applies to all Roles)

- Login
- Sign Up
- Forgot Password
- Notifications (Email / SMS)
- Mobile / Desktop Layouts

9.2. Admin Wireframes

- Permission Logic / Role Creation
- Admin Dashboard
- Calendar Scheduler (Weekly/Monthly)
- Add Class
- Edit Class
- Duplicate Class
- Substitute Instructor Screen
- Products (Packages, Memberships)
- Reports Dashboard

9.3. Instructor Wireframes

- Instructor Schedule
- Instructor Profile
- Class Detail
- Attendance Marking

9.4. Member Wireframes

- Browse Classes
- Filters
- Class Details
- Booking Flow
- Waitlist Screen
- Booking Confirmation
- My Bookings
- Payment Flow
- Member Profile

10. Security

10.1. Audit Log

- Track admin actions (pricing, class changes, freezes)
 - Log user, timestamp, and reason
- 10.2. GDPR compliant
- 10.3. PCI-DSS (Payment Card Industry Data Security Standard) via Stripe/Checkout (never store card info)
- 10.4. Encrypted passwords
- 10.5. Secure API tokens
- 10.6. User permission enforcement

11. Support + Feedback

- 11.1. FAQ
- 11.2. Contact form
- 11.3. WhatsApp integration
- 11.4. Instructor & class ratings
- 11.5. Report a problem
- 11.6. In-app guided onboarding for admins
- 11.7. A tooltip system (“?” icons inside dashboard)

12. Marketing

- 12.1. Marketing Automation
- 12.2. Marketing Campaigns

13. Design Direction

- 13.1. Clean, minimal, elegant
- 13.2. Mobile-first
- 13.3. Neutral colors, white space
- 13.4. Simple typography
- 13.5. Avoid busy UI

Priority Table	
P1 - Must Have	Scheduling, Booking, Payments, Member accounts, Notifications, Basic analytics
P2 - Later	Add-on services, Instructor views, Level-locking logic, Cancellations & Penalties Inventory Marketing automation, SMS, Push, AI
